The World War II Bond Campaign Lawrence R. Samuel, 2025-02-04 How America's greatest marketing triumph in World War II shaped race ethnicity and class in modern America The World War II Bond Campaign is a history of the World War II bond drive led by the federal government an effort called the most successful marketing operation in history By the war's end some 85 million Americans had spent 186 billion in an unprecedented outpouring of patriotism that contributed to the military victory and the prosperity of the following decades The FDR administration used bonds to raise capital to support the war and promote national unity within the context of the nation's increasingly pluralistic society as the melting pot theory was retired African Americans Euro Americans and labor union members enthusiastically bought bonds to express national loyalty but also to demonstrate racial ethnic or class pride a reflection of their dualistic or hyphenated identities Drawing on various primary sources The World War II Bond Campaign illustrates how the Treasury Department's multicultural marketing strategies tapped into Americans' aspirations alongside their patriotic impulses Citizens of all social and economic backgrounds eagerly responded to what can be seen as the selling of America making the subject an ideal lens to view national identity at a critical moment in the country's history The author contends that the drive's success helped pave the way for the emergence of both the civil rights movement and the vigorous consumer culture of the postwar years

Radiation-induced and oxidative DNA damages Antonio Monari,Elise Dumont,Chrysostomos Chatgililoglu,2015-10-02 DNA stores and passes the genetic information of almost all living organisms Its molecular structure and their intramolecular interactions are particularly suitable to maximize stability against oxidative stress and UV light absorption Yet the protection and repair strategies are still error prone DNA lesions are produced including the most complex and highly mutagenic ones An important threat to DNA stability comes from photosensitization i e from the dramatic multiplication of radiation induced defects mediated by the presence of organic or organometallic dyes compared to the direct exposure to UVA radiation Moreover the photo induced production of singlet oxygen generates an extremely high oxidative stress on DNA that in vivo normally results in extended cellular apoptosis Elucidating the processes leading to DNA damages from the production of a simple radical entity to deleterious lesions as well as the opportunities of repair by devoted enzymes is a cornerstone towards the development of more efficient protection strategies Sensitization and selective production of DNA lesions can also be exploited to induce the selective apoptosis of cancer cells upon exposition to radiation or to oxidative stress for instance in the field of photodynamic therapy The importance and relevance of the field is witnessed by the impressive amount of high level papers dealing with this complex subject and notably tackling the structural elucidation of DNA and DNA drug adducts the mechanisms of formation of DNA lesions including the precise detection of the final lesion products as well as the influence of the lesions on the DNA stability and dynamics and the consequences on the ease of repair Due to the complexity of the field lying at the frontiers between chemistry physics and biology multidisciplinary strategies allying modeling and experience are needed This topic aims at giving an extended overview of the current research in the domain with fundamental contribution from the leading groups in the field of DNA reactivity structural characterization photo chemistry and photo physics as well as repair mechanism It will therefore be a fundamental guide for scientists wanting to address the field of DNA lesion and repair but also more generally for researchers working in rational drug design or in the development of biomarkers and medical imaging techniques **The NIH Record** ,1994 **Improving Doctoral Education and Research Development for Sustainability** Tariq, Muhammad Usman,2025-06-30 Improving doctoral education and research development advances sustainability in an interconnected world As global challenges like climate change resource depletion and social inequality rise there is a demand for skilled researchers capable of generating innovative interdisciplinary solutions Doctoral programs must evolve to increase academic expertise while fostering critical thinking

Data Analysis For Network Cyber-security Niall M Adams,Nicholas A Heard,2014-04-04 There is increasing pressure to protect computer networks against unauthorized intrusion and some work in this area is concerned with engineering systems that are robust to attack However no system can be made invulnerable Data Analysis for Network Cyber Security focuses on monitoring and analyzing network traffic data with the intention of preventing or quickly identifying malicious activity Such work involves the intersection of statistics data mining and computer science Fundamentally network traffic is relational embodying a link between devices As such graph analysis approaches are a natural candidate However such methods do not scale well to the demands of real problems and the critical aspect of the timing of communications events is

not accounted for in these approaches This book gathers papers from leading researchers to provide both background to the problems and a description of cutting edge methodology The contributors are from diverse institutions and areas of expertise and were brought together at a workshop held at the University of Bristol in March 2013 to address the issues of network cyber security The workshop was supported by the Heilbronn Institute for Mathematical Research
