Author: Man Xiong
Microsoft Corporation

March 2002

Abstract: In this paper we focus on a common scenario where a single system hosts many databases with a relatively small number of users per database. The effects of the parameters mentioned above are studied on an actual application, called the "PACE." PACE is a financial application from Microsoft® bCentral™ that is running on a combination of servers: Microsoft® SQL Server™ 2000 Enterprise Edition, Microsoft Windows® 2000 Datacenter™ Server, and Dell PowerEdge 8450 servers.
