Psychological Aspects of Sport-Related Concussions Gordon Bloom, Jeffrey

Caron, 2019-03-13 Recognition of concussion as a serious injury informed by neurological and physiological research is now commonplace in sport. However, research on the psychology of concussive injury, its psychological implications and outcomes, and psychological interventions for prevention and recovery has largely been overlooked. This is the first book to explicitly and authoritatively set out the psychological aspects of sport-related concussion from a multidisciplinary and global perspective. The book attempts to offer a global understanding of the injury by presenting an historical overview, exploring the psychological implications of sport-related concussion and the influence of gender and sociocultural context on concussive injury and recovery, setting out practical guidance on working with special populations suffering from concussive injuries, and discussing the theoretical and methodological considerations for research on concussion and future directions for this research. Written by a group of leading international experts and offering a hitherto underdeveloped perspective on this crucial area of sports injury research, this book is crucial reading for any upper-level student, researcher, sport scientist, coach, or allied health professional working on sport-related concussion. It is also valuable reading for students and researchers interested in the psychosocial processes that impact injury and recovery or general professional practice in sport psychology.

Sociocultural Examinations of Sports Concussions Matt Ventresca, Mary McDonald, 2019-11-18 Sport's concussion crisis has been characterized by controversial scientific discoveries, athlete suicides, and high-profile lawsuits involving professional sports leagues, while provoking widespread media coverage, changes to game rules, and debate about the future of many popular sports. *Sociocultural Examinations of Sports Concussion* is the first edited collection to bring together multiple sociocultural perspectives on sports concussion that interrogate the social, economic, political, and historical forces shaping the cultural impacts of these injuries. Each of the ten chapters moves beyond biomedical or neuroscientific paradigms to critically examine a specific intersection of sociocultural factors influencing public perceptions about concussion or athlete experiences of brain injury. These include analyses of media and advertising, medical treatment and diagnostic protocols, gender and masculinity, developments in equipment and scientific models, economics and labor, politics, understandings of trauma and recovery, public health philosophies, and disciplinary differences in framing the ontologies of concussion. Drawing from a wide range of theoretical and methodological approaches, *Sociocultural Examinations of Sports Concussion* offers a diverse set of analyses examining brain injuries as cultural and embodied phenomena affecting more than just athletes' brains but also embedded within and re-shaping meanings, identities, and social contexts. It is valuable reading for graduate students and researchers interested in the experience and treatment of sports concussion, sports sociology, and sports technology.

Foundations of Sport-Related Brain Injuries Semyon M. Slobounov, Wayne J.

Sebastianelli, 2006-08-25 This book is the partial product of a conference on concussion in athletics held at the Pennsylvania State University April 29-30, 2004. For a number of reasons, it seemed timely to hold such a conference as well as to condense our current understanding of mechanisms, predispositions, and latest developments in evaluation and management of sport

related concussions in a single book format Despite dramatic advances in medicine traumatic brain injury commonly known as concussion is still one of the most puzzling and least understood injuries facing the sport medicine world today There still is no universal agreement assigning the level of severity of the sport related concussions nor is there any treatment besides the passage of time Medicine's inability to fully understand concussion has led us to question when it is truly safe to return an athlete to full sport participation so that the threat for risk of re injury is minimized The need for a multidisciplinary approach to understanding the sport related concussions stems from recent evidence that there are long lasting residual behavioral psychological and neural disabilities that are often overlooked using current research methods The notion of transient and rapid symptoms resolution is misleading since symptoms resolution is frequently not indicative of injury resolution There are no two traumatic brain injuries alike in mechanism symptomatology or symptoms resolution Most grading scales are based on loss of consciousness and post traumatic amnesia both of which occur infrequently in sport related mild traumatic brain injuries

Sports-Related Concussions in Youth National Research Council, Institute of Medicine, Board on Children, Youth, and Families, Committee on Sports-Related Concussions in Youth, 2014-02-04 In the past decade few subjects at the intersection of medicine and sports have generated as much public interest as sports related concussions especially among youth Despite growing awareness of sports related concussions and campaigns to educate athletes coaches physicians and parents of young athletes about concussion recognition and management confusion and controversy persist in many areas Currently diagnosis is based primarily on the symptoms reported by the individual rather than on objective diagnostic markers and there is little empirical evidence for the optimal degree and duration of physical rest needed to promote recovery or the best timing and approach for returning to full physical activity Sports Related Concussions in Youth Improving the Science Changing the Culture reviews the science of sports related concussions in youth from elementary school through young adulthood as well as in military personnel and their dependents This report recommends actions that can be taken by a range of audiences including research funding agencies legislatures state and school superintendents and athletic directors military organizations and equipment manufacturers as well as youth who participate in sports and their parents to improve what is known about concussions and to reduce their occurrence Sports Related Concussions in Youth finds that while some studies provide useful information much remains unknown about the extent of concussions in youth how to diagnose manage and prevent concussions and the short and long term consequences of concussions as well as repetitive head impacts that do not result in concussion symptoms The culture of sports negatively influences athletes self reporting of concussion symptoms and their adherence to return to play guidance Athletes their teammates and in some cases coaches and parents may not fully appreciate the health threats posed by concussions Similarly military recruits are immersed in a culture that includes devotion to duty and service before self and the critical nature of concussions may often go unheeded According to Sports Related Concussions in Youth if the youth sports community can adopt the belief that concussions are serious injuries and
