

Biology Exam 1 Study Guide

Lecture 1 → Introduction to Biological Science

Tree of Life

- Domains
 - Eukarya → visible life
 - Split into animals and plants
 - Very small portion
 - Bacteria → single cell
 - Make up most of life's branches
 - Symbionts that evolved into mitochondria and chloroplasts were eubacteria
 - Archaea → original domain of life
 - More closely related to eukaryotes than eubacteria, first branch of life
 - Basic split between archaea and bacteria
- Candidate phyla radiation: Single species have been identified, each identifies an entire phylum which is yet to be understood - pioneer species (tree is dominated by new species that scientists have never seen before)
- Species disappearing faster than can be recovered
- Eukaryotes and archaea are most closely related branches

Destruction and Mass Extinction

- One million species face imminent extinction because of humans
- Recent past → >50% vertebrates/>75% flying insects lost in the past <50 years
- Critically threatened → >40% amphibians, >30% plants/corals/sharks, >25% mammals
- Populations and extinctions have increased

Theory of Evolution

- Evolution: all life on earth evolved from a common ancestor, most properties within cells work in the same way, the change in gene distribution over time within a population
- Theory: a very well substantiated idea that explains many overlapping phenomena at once. wide-ranging, strongest. Not a hypothesis
- Darwin: species arise through random mutation and natural selection for fitness
- Evidence (fewer than 40% of Americans believe in evolution)
 - fossil record shows conservation of homologous structures
 - Molecular proof: same DNA and RNA protein in cells
 - Homologous function in hands and fins → evolved similar mechanisms in appendages
- Scopes Monkey Trial
 - Scopes taught evolution illegally: resulted in Butler Act → forbid teaching evolution in TN
- Endosymbiont theory
 - Single composite cell of greater complexity could evolve from two or more separate simpler living cells in a symbiotic relationship

Year of Earth's History

- 1 Jan: earth formed 4.54 bya by acceleration of material from the solar nebula via gravitational collapse, conditions were incompatible with life, bombarded with asteroid-sized meteors for 800 million years
- 4 Mar: by 3.8 bya bombardment had slowed, Earth had cooled to lower the temps "compatible" with life

Investigating the human brainstem with structural and functional MRI Florian Beissner, Simon Baudrexel,2014-07-30

The brainstem is one of the least understood parts of the human brain despite its prime importance for the maintenance of basic vital functions Owing to its role as a relay station between spinal cord cerebellum and neocortex the brainstem contains vital nodes of all functional systems in the central nervous system including the visual auditory gustatory vestibular somatic and visceral senses and the somatomotor as well as autonomic nervous systems While the brainstem has been extensively studied in animals using invasive methods human studies remain scarce Magnetic resonance imaging MRI as a non invasive and widely available method is one possibility to access the brainstem in humans and measure its structure as well as function The close vicinity of the brainstem to large arteries and ventricles and the small size of the anatomical structures

however place high demands on imaging as well as data analysis methods Nevertheless the field of brainstem f MRI has significantly advanced in the past few years largely due to the development of several new tools that facilitate studying this critical part of the human brain Within this scope the goal of this Research Topic is to compile work representing the state of the art in functional and structural MRI of the human brainstem The Reader's Index & Guide Croyden Public Libraries,1934 **The Reader's Index and Guide** ,1931 **Union List of Serials in Libraries of the United States and Canada** Winifred Gregory Gerould,1943
