# FLVS Physical Science Segment 1 Exam Study Guide 2022 with complete solution

**Motion** - a change in position of an object, relative to a frame of reference.

**Frame of reference** - a place or object that appears to be fixed (not moving). You observe how other objects move by comparing them to that frame of reference.

**Speed** - how fast an object is going in comparison to a frame of reference

**Velocity** - the measure of the speed and the direction of an object.

**Acceleration** - change in velocity over time. If the velocity increases, then there is a positive acceleration. If the velocity decreases, then there is a negative acceleration

**Force** - a push or pull applied to an object

**Net force** - all forces acting on an object (some objects have more than 1 force acting on it)

**Balanced forces** - equal forces are pushing in opposite directions, canceling each other out and we see no movement occur as a result. (net force = 0)

**Unbalanced forces** - when two forces are pushed/pulled in opposite directions, the stronger one will force both in its direction.

**Friction** - a force that works against the motion of an object. Causes an object to slow down.

**Newton's first law of motion** - a force is needed to change the motion of an object. An object in motion will stay in motion, an object at rest (not moving) will remain at rest unless an unbalance force (remember must be unbalanced or it won't move) acts on it

**Inertia** - an object's resistance to a change in its motion. The greater the mass of the object, the greater the force needed to move it or stop it.
