Network-Oriented Modeling for Adaptive Networks: Designing Higher-Order Adaptive Biological, Mental and Social Network Models Jan Treur, 2019-11-01 This book addresses the challenging topic of modeling adaptive networks which often manifest inherently complex behavior Networks by themselves can usually be modeled using a neat declarative and conceptually transparent Network Oriented Modeling approach In contrast adaptive networks are networks that change their structure for example connections in Mental Networks usually change due to learning while connections in Social Networks change due to various social dynamics For adaptive networks separate procedural specifications are often added for the adaptation process Accordingly modelers have to deal with a less transparent hybrid specification part of which is often more at a programming level than at a modeling level This book presents an overall Network Oriented Modeling approach that makes designing adaptive network models much easier because the adaptation process too is modeled in a neat declarative and conceptually transparent Network Oriented Modeling manner like the network itself Thanks to this approach no procedural algorithmic or programming skills are needed to design complex adaptive network models A dedicated software environment is available to run these adaptive network models from their high level specifications Moreover because adaptive networks are described in a network format as well the approach can simply be applied iteratively so that higher order adaptive networks in which network adaptation itself is adaptive second order adaptation too can be modeled just as easily For example this can be applied to model metaplasticity in cognitive

neuroscience or second order adaptation in biological and social contexts The book illustrates the usefulness of this approach via numerous examples of complex higher order adaptive network models for a wide variety of biological mental and social processes The book is suitable for multidisciplinary Master s and Ph D students without assuming much prior knowledge although also some elementary mathematical analysis is involved Given the detailed information provided it can be used as an introduction to Network Oriented Modeling for adaptive networks The material is ideally suited for teaching undergraduate and graduate students with multidisciplinary backgrounds or interests Lecturers will find additional material such as slides assignments and software
