Developing the Blue Economy Robert C. Brears, 2021-10-20 Traditionally the ocean economy is viewed solely as a mechanism for economic growth In this business as usual approach large scale industrial economies have developed the ocean economy through the exploitation of maritime and marine resources often without consideration of how those activities impact the future health or productivity of those same resources This has led to aquatic ecosystems being viewed and treated as limitless resources the marine environment becoming a dumping ground for waste overfishing diminishing fishing stocks ocean habitats being degraded from coastal developments sea level rise impacting coastal communities and infrastructure increasing ocean acidification and the marginalisation of poor coastal communities Recognising the failings of the traditional ocean economy there is a transition underway around the world towards the Blue Economy This concept moves beyond the business as usual approach with economic development and ocean health complementary to one another In the Blue Economy the environmental risks of and ecological degradation from economic activity are mitigated or significantly reduced Therefore economic activity is in balance with the long term capacity of the ocean ecosystems to support this activity and remain healthy and resilient This book will provide an overview of the various technologies used to promote cross sectoral and multi scalar collaboration facilitate the integrated management of sectors and resources foster partnerships between governments and industry encourage R D in new technologies in resource use and management and scale up innovative financing mechanisms in the development of a Blue Economy Also the book will contain in depth case studies that illustrate how locations of differing climates lifestyles and income levels have implemented technologies to facilitate the development of the Blue Economy
