it gives new understanding to the development of Britain as the world's first industrial nation. Based on the first long-term whole population analysis of British small business, it uses novel methods to identify from the 10 yearly population census the two to four million people per year who operated businesses in the period 1851-1911. Using big data analytics, it reveals how British businesses evolved over time, supplementing the census-derived data on individuals with other sources on companies and business histories. By comparing to modern data, it reveals how the late Victorian period was a golden age for smaller and medium-sized business, driven by family firms, the accelerating participation of women, and the increasing use of incorporation as significant vehicles for development. A unique resource and citation for future research on entrepreneurship of crucial significance to economic development policies for small business around the world, and above all, the key entry point for researchers to the database which is deposited at the UK Data Archive, this major publication will change our understanding of the scale and economic significance of small businesses in the nineteenth century.

Nation, State and the Industrial Revolution Lars Magnusson, 2009-09-10. This book puts the industrial revolution in a political and institutional context of state making and the creation of modern national states, demonstrating that industrial transformation was connected to state and military interests.

Transport and the industrial city Peter Maw, 2018-02-28. This book presents the first scholarly study of the contribution of canals to Britain's industrial revolution. Although the achievements of canal engineers remain central to popular understandings of industrialisation, historians have been surprisingly reticent to analyse the full scope of the connections between canals, transport, and the first industrial revolution. Focusing on Manchester, Britain's major centre of both industrial and transport innovation, it shows that canals were at the heart of the self-styled Cottonopolis. Not only did canals move the key commodities of Manchester's industrial revolution—coal, corn, and cotton—but canal banks also provided the key sites for the factories that made Manchester the shock city of the early Victorian age. This book will become essential reading for historians and students interested in the industrial revolution, transport, and the unique history of Manchester, the world's first industrial city.

The Importance of British Material Culture to Historical Archaeologies of the Nineteenth Century Alasdair Brooks, 2016. Britain was the industrial and political powerhouse of the nineteenth century, the birthplace of the Industrial Revolution and the center of the largest empire of the time. With its broad imperial reach and even broader indirect influence, Britain had a major impact on nineteenth-century material culture worldwide. Because British manufactured goods were widespread in British colonies and beyond, a more nuanced understanding of those goods can enhance the archaeological study of the people who used them far beyond Britain's shores. However, until recently, archaeologists have given relatively little attention to such goods in Britain itself, thereby missing what is often revealing and useful contextual information for historical archaeologists working in countries where British goods were consumed while also leaving significant portions of Britain's own archaeological record poorly understood. *The Importance of British Material Culture to Historical Archaeologies of the Nineteenth Century* helps fill these gaps through

case studies demonstrating the importance and meaning of mass produced material culture in Britain from the birth of the Industrial Revolution mid 1700s to early World War II By examining many disparate items such as ceramics made for export various goods related to food culture Scottish land documents and artifacts of death these studies enrich both an understanding of Britain itself and the many places it influenced during the height of its international power *An Economic History of Regional Industrialization* Bas van Leeuwen, Robin C.M. Philips, Erik Buyst, 2020-10-22 This book offers a comprehensive study of regional industrialization in Europe and Asia from the early nineteenth century to the present Using case studies on regional industrialization the book provides insights into similarities and differences in industrialization processes between European Eurasian and Asian countries Important factors include the transition from traditional to modern industrial production industrial policy agglomeration forces market integration and the determinants of industrial location over time The book is an invaluable reference that attempts to bridge the fields of economic history political history economic geography and economics while contributing to the debates on economic divergence between Europe and Asia as well as on the role of economic integration and globalization Regulating the British Economy, 1660-1850 Perry Gauci, 2016-04-08 This collection of chapters focuses on the regulation of the British economy in the long eighteenth century as a means to understand the synergies between political social and economic change as Britain was transformed into a global power Inspired by recent research on consumerism and credit an international team of leading academics examine the ways in which state and society both advanced and responded to fundamental economic changes The studies embrace all aspects of the regulatory process from developing ideas on the economy to the passage of legislation and to the negotiation of economic policy and change in practice They range broadly over Britain and its empire and also consider Britain's exceptionality through comparative studies Together the book challenges the general characterization of the period as a shift from a regulated economy to a more laissez faire system highlighting the uncertain relationship between the state and economic interests across the long eighteenth century *Family Firms in Postwar Britain and Germany* David Paulson, 2023 Examines the culture and conduct of six small and medium sized enterprises SMEs in England and West Germany from 1945 to the late 1970s drawing on numerous archives in Germany and Britain This is the first book length study that examines the detailed histories of SMEs in a comparative transnational manner Emerging from this study is an evaluation of German and British varieties of capitalism in action showing that they were not fixed or static but rather have changed considerably as they evolved over time The German companies studied formed part of the Mittelstand the family owned sector which is unique to German speaking countries This book explores whether the principles of a close identification with the surrounding region and a patriarchal culture within a family atmosphere were adopted in practice then and whether they are still applicable today Paulson compares the Mittelstand to British SMEs in order to understand how their approach differed from that of their German counterparts For both countries the ecosystem which surrounded businesses is examined paying

particular attention to funding and vocational education The book concludes that the potential for a British Mittelstand existed but that British companies were often less well managed and had to operate within a less supportive external environment than that which favoured the Mittelstand Historical lessons learned from the management of these companies still resonate today and can help us to understand contemporary differences in business performance This book will therefore be of interest to scholars and students of twentieth century business and economic history as well as management studies
