God and cosmology is far from abstract In fact the subject raises the deepest questions of human existence Why is there something rather than nothing Or to put it more personally Why am I here Structured as a debate the 2014 Greer Heard Forum focused on the issue of God and cosmology and its impact on life and self understanding Christian philosopher William Lane Craig and atheist cosmologist Sean Carroll presented their views before a packed crowd of more than nine hundred people Spirited civil and often humorous the debate highlighted not only their positions but the full range of possibilities In this volume the content of that debate is reprinted and supplemented by a range of reflections by other conference presenters The purpose of the Greer Heard Point Counterpoint Forum is to provide a venue for fair minded dialogue on subjects of importance in religion and culture The goal is a respectful exchange of ideas without compromise **Ouantum Structure of Space and Time** David Gross, 2007 Ever since 1911 the Solvay Conferences have shaped modern physics The 23rd edition chaired by 2004 Nobel Laureate David Gross did not break with that tradition It gathered most of the leading figures working on the central problem of reconciling Einstein's theory of gravity with quantum mechanics These proceedings give a broad overview with unique insight into the most fundamental issues raised by this challenge for 21st century physics by distinguished renowned scientists The contributions cover the status of quantum mechanics spacetime singularities and breakdown of classical space and time mathematical structures underlying the most promising attempts under current development spacetime as an emergent concept as well as cosmology and the cosmological constant puzzle A historical overview of the Solvay conferences by historian of sciences Peter Galison opens the volume In the Solvay tradition the volume also includes the discussions among the participants many of which were quite lively and illustrate dramatically divergent points of view carefully edited and reproduced in full Unexplained Mysteries of the Universe Arpit Kottur, Space Universe have always attracted human race There have been several mystries associated with this Humans have always will continue to travel to find what exactly is hidden in space out there I at age of 15 am no different have plans to Five-dimensional Physics: Classical And solve the mysteries So come join me in understanding few mysteries Quantum Consequences Of Kaluza-klein Cosmology Paul S Wesson, 2006-02-10 Extra dimensions beyond space and time are the best methods for unifying gravity with particle physics The basic extension is to five dimensions 5D as in the induced matter and membrane theory. This descriptive text gives an up to date account of the classical and quantum consequences of 5D physics It includes topics that range from Einstein's original theory of relativity to modern views on matter The book is mathematically precise and focuses on new ideas which appeal to readers Examples of new ideas are The big bang universe which is curved by matter in 4D may be viewed as a smooth and empty world in 5D the uncertainty of quantum interactions in spacetime may be regarded as the consequence of deterministic laws in higher dimensions. converge This is not a textbook It is a meditation A philosophical exploration born from a single transformative moment that reframed existence itself dissolving the boundaries between Eastern wisdom and Western science between knowing and being Drawing on Taoism Buddhism quantum mechanics and cosmology Hoyng traces how ancient intuitions foreshadowed modern insights He examines how the universe might end and how it might have begun He explores what happens when you strip away assumptions about particles fields and spacetime asking instead what if reality emerges from information itself The result is a speculative framework minimal elegant and open suggesting that existence may be governed not by substance but by stochastic rules acting on an informational substrate It s a vision that accommodates both the rigor of physics and the depth of contemplative practice Nothing Becomes is for those who seek Meaning without myth Presence without performance Truth without overreach For readers who sense that the deepest questions cannot be answered by science or spirituality alone but perhaps by holding both with equal reverence This is a moment held open An invitation to remember what was never quite forgotten
