

Fig. 21 What a trim tab should look like when it's in good condition

Fig. 22 Such extensive erosion of a trim tab compared with a new tab suggests an electrolysis problem or complete disregard for periodic maintenance

Fig. 23 Although many outboards use the trim tab as an anode . . .

Fig. 24 . . . other types of anodes are also used throughout the outboard, like this one on the stern bracket . . .

Fig. 25 . . . and this one on the lower unit

Fig. 26 Anodes installed in the water jacket of a powerhead provide added protection against corrosion

Fig. 27 Most anodes are easily removed by loosening and removing their attaching fasteners

Fig. 28 One of the many lead wires used to connect bracketed parts. Lead wires are used as an assist in reducing corrosion

Battery

Difficulty in starting accounts for almost half of the service required on boats each year. A survey by Champion Spark Plug Company indicated that roughly one third of all boat owners experienced a "won't start" condition in a given year. When an engine won't start, most people blame the battery when, in fact, it may be that the battery has run down in a futile attempt to start an engine with other problems.

Maintaining your battery in peak condition may be thought of as either tune-up or maintenance material. Most wise boaters will consider it to be both. A

complete check up of the electrical system in your boat at the beginning of the boating season is a wise move. Continued regular maintenance of the battery will ensure trouble free starting on the water.

A complete battery service procedure is included in the "Maintenance" section of this manual. The following are a list of basic electrical system service procedures that should be performed as part of any tune-up.

- Check the battery for solid cable connections
- Check the battery and cables for signs of corrosion damage
- Check the battery case for damage or electrolyte leakage
- Check the electrolyte level in each cell
