Are We There Yet? The Search for a Theory of Everything Moataz H. Emam, 2011-03-25 We live in exciting times the frontiers of physics have been pushed to unprecedented horizons the Holy Grail of fundamental physics research today is to find and describe a theory that explains at least in principle all physical phenomena which in turns explains chemistry biology and other material sciences This however is not without controversy the current candidate for such a theory is known as string or superstring theory It suffers from the problem of being a purely mathematical science with no experimental backing and belief in it has been criticized as bordering on faith as opposed to scientific scrutiny On the other hand the recent switching on of our most advanced experimental tool the Large Hadron Collider in Switzerland gives new hope in our search for clues as to what the universe is made of on a fundamental level What happened exactly on or even before the Big Bang Where are we coming from and where are we going Questions that have never been addressed before by physicists the game is afoot and the search is on This book contains articles by leading physicists describing the current situation Among them are proponents as well as opponents of string theory proponents of other ideas and experimentalists

Are We Being Watched?: The Search for Life in the Cosmos Paul Murdin, 2013-04-01 An engaging exploration with renowned astronomer Paul Murdin of how life emerged on Earth and the possibilities that it exists elsewhere There is no more fascinating question than whether or not we are alone in a vast universe Here Paul Murdin applies the latest scientific discoveries and theories to inquire whether life exists on other planets and if so what forms it might take Could there be somewhere life as advanced as here on Earth or are we more likely to find primitive life forms Or are we the sole living organisms in a desolate and boundless cosmos Professor Murdin invites us to join him in exploring an extraordinary array of evidence to determine if there is life elsewhere in the cosmos He examines the case for life on Mars and Europa and asks whether on Enceladus or Titan we might find the warm little pond that Darwin speculated was where life began here on Earth Describing the cosmic habitats that produce the alien worlds of our solar system and others he examines the chances of finding life and the prospects for successful communication with an extraterrestrial intelligence

Holmes,2001 Viewing attachment based therapy as a variant of object relations the book argues strongly for a rapprochement between psychoanalysis and attachment theory **Truth and Democracy** Jeremy Elkins,Andrew Norris,2012-01-31 Political theorists Jeremy Elkins and Andrew Norris observe that American political culture is deeply ambivalent about truth On the one hand voices on both the left and right make confident appeals to the truth of claims about

the status of the market in public life and the role of scientific evidence and argument in public life human rights and even religion On the other hand there is considerable anxiety that such appeals threaten individualism and political plurality This anxiety Elkins and Norris contend has perhaps been greatest in the humanities and in political theory where many have responded by either rejecting or neglecting the whole topic of truth The essays in this volume question whether democratic politics requires discussion of truth and if so how truth should matter to democratic politics While individual essays approach the subject from different angles the volume as a whole suggests that the character of our politics depends in part on what kinds of truthful inquiries it promotes and how it deals with various kinds of disputes about truth The contributors to the volume including prominent political and legal theorists philosophers and intellectual historians argue that these are important political and not merely theoretical questions
