Reporting Histopathology Sections David Lowe Paola Domizio, 2013-12-14 *Histopathology of the Endometrium* Gisela Dallenbach-Hellweg, 2013-03-09 The endometrium differs from all other tissues of the body in that it rhythmically changes its structure and function For many years the meaning of these changes remained puzzling and obscure At about the turn of the century some investigators held the physiological fluctuations of the menstrual cycle to be inflammatory changes Later when stricter criteria for the pathology of the endometrium were applied morphologists misinterpreted pathological fluctuations in the cycle either as physiological variations or they overlooked them entirely Today as previously the pathologist is often confronted with the dilemma that he is unable to adequately diagnose the endometrium merely from the structural changes Accordingly the gynecologist finds the pathological report of little value In like manner if the clinical information given the pathologist is incomplete then he cannot form a clear notion of the clinical problem Although the detection of focal lesions of the endometrium is important of much greater consequence is the recognition of functional hormonally controlled variations and their cyclic course for it is from these that the clinician is guided in deciding what therapy he should use The ability to detect such functional changes requires not only that the morphologist possess a thorough knowledge of the physiological and pathological anatomy of the endometrium but also that he receive exact information about the patient's menstrual history and have in sight into clinical problems **The Histology of Borderline Cancer** W.W. Post Mortem Technique Handbook Michael T. Sheaff,Deborah J. Hopster,2013-03-09 The relentless decline in the hospital based autopsy has been documented else where in detail and has been generally deplored as a loss of an important method of quality control at a time when the practise of Medicine is closely scrutinised This is not the place to revisit these well rehearsed arguments but the change itself provides a powerful justification for the production of this book The decrease in clinically requested autopsies in hospitals leaves a large and increasing number of Coronal autopsies to be done many of these in circumstances of discontent with some aspect of the medical or other management of the events which ultimately lead to death The pathologists now performing these autopsies will not have had the amount of experience that was commonplace among their predecessors an experience of carrying out procedures which although devised for different purposes can provide a more complete examination of the whole body than often appears necessary in straightforward deaths in the community In my first two years in Pathology I performed 200 autopsies most of my contemporaries will have had a similar grounding it would not be possible to provide this experience for staff in training now except in some parts of the European mainland So there is a need to provide a written but practical account of the autopsy which will help those who may find themselves in unfamiliar territory
