Countries in South and Southeast Asia are endowed with abundant renewable energy resources. This book examines the energy mix of the countries such as India, Myanmar, Thailand, Bangladesh, and Bhutan among others and their efforts to achieve more integrated markets and renewable energy integration in the region. It highlights the potential of Northeast India given its rich natural resources and strategic location to harness the potential cross-border energy trade with ASEAN countries. The volume provides analytical perspectives on drivers, constraints, opportunities, and barriers, as well as measures that countries could take to address institutional, financial, policy, and governance issues to minimize the total costs of energy security and maximize the social-economic benefits for people in these regions. It identifies the necessary conditions, grid flexibility, policy, market, and regulatory solutions for clean energy trade and contributes to growth of low-carbon development as well as policy making by focusing on renewable energy integration across borders. Hybrid Solutions for the Modelling of Complex Environmental Systems Christian E. Vincenot, Stefano Mazzoleni, Lael Parrott, 2017-01-11

Systems studied in environmental science due to their structure and the heterogeneity of the entities composing them often exhibit complex dynamics that can only be captured by hybrid modeling approaches. While several concurrent definitions of hybrid modeling can be found in the literature, it is defined here broadly as the approach consisting in coupling existing modelling paradigms to achieve a more accurate or efficient representation of systems. The need for hybrid models generally arises from the necessity to overcome the limitation of a single modeling technique in terms of structural flexibility, capabilities, or computational efficiency. This book brings together experts in the field of hybrid modelling to demonstrate how this approach can address the challenge of representing the complexity of natural systems. Chapters cover applied examples as well as modeling methodology.

European Financial Imbalances: Implications of the Eurozone Sovereign Debt Problem for U.S. Agricultural Exports , The Impact of Food Price Shocks in Uganda Bjorn Van Campenhout,Karl Pauw,Nicholas Minot,2013-08-14 In developing countries all too often policies formulated in response to high food prices are inspired by ideology instead of evidence based policy research We look at the immediate effects of these shocks faced by households in Uganda on their poverty and well being In addition we look at the economywide impact in the long run when all markets have settled at a new equilibrium We find that in the short run poverty has increased substantially However in the longer run we find welfare levels of rural farm households in particular to rise sharply primarily as a result of increased returns to farm labor and agricultural land coupled with improved market prices for output sold These results call for policies that aim to protect the most vulnerable against high food prices and extreme volatility in the short run without eliminating the incentives of steadily rising commodity prices for longer run structural agricultural development
