Week 8: Elasticity

Assignment 1: Elasticity and the Elasticity of Demand

Assignment 2: Elasticity and the Elasticity of Demand

Assignment 3: Elasticity and the Elasticity of Demand

What is Elasticity?

Elasticity is a measure of the responsiveness of a variable to a change in another variable.

Types of Elasticity

There are three types of elasticity: price elasticity of demand, price elasticity of supply, and cross-price elasticity of demand. Price elasticity of demand measures the responsiveness of quantity demanded to a change in price. Price elasticity of supply measures the responsiveness of quantity supplied to a change in price. Cross-price elasticity of demand measures the responsiveness of quantity demanded of one good to a change in the price of another good.

$$E_d = \frac{\Delta Q_d}{Q_d} \div \frac{\Delta P}{P}$$

Elasticity Calculations

$$E_d = \frac{\Delta Q_d}{Q_d} \div \frac{\Delta P}{P} = \frac{100 - 80}{80} \div \frac{10 - 5}{5} = 1.25$$

1. Calculate the price elasticity of demand for the following data:

2. Calculate the price elasticity of demand for the following data. Compare the results using the midpoint elasticity formula.

Q	BEFORE COLLISION		AFTER COLLISION		Price	AFTER COLLISION	
	Q_1	Q_2	Q_1	Q_2		Q_1	Q_2
1	100 kg	120 kg	1.5 m/s	2.5 m/s	10 kg/m/s		
2	100 kg	120 kg	1.5 m/s	1.5 m/s	10 kg/m/s		
3	100 kg	120 kg	1.5 m/s	1.5 m/s	10 kg/m/s		
4	100 kg	120 kg	1.5 m/s	1.5 m/s	10 kg/m/s		

3. Calculate the price elasticity of demand for the following data. Compare the results using the midpoint elasticity formula.

4. Calculate the price elasticity of demand for the following data. Compare the results using the midpoint elasticity formula.

Unit 6 Momentum Internet Lab:

Heat Transfer Virtual Lab for Students and Engineers Ella Fridman, Harshad Mahajan, 2014-09-15 Laboratory experiments are a vital part of engineering education which historically were considered impractical for distance learning. This book presents a guide for the practical employment of a heat transfer virtual lab for students and engineers. Inside the authors have detailed this virtual lab which is designed and can implement a real time robust and scalable software system that provides easy access to lab equipment anytime and anywhere over the Internet. They introduce and explain LabVIEW in easy to understand language. LabVIEW is a proprietary software tool by National Instruments and can be used to develop fairly complex instrumentation systems measurement and control. Fridman and Mahajan combined Internet capabilities with traditional laboratory exercises to create an efficient environment to carry out interactive on line lab experiments. Thus the virtual lab can be used from a remote location as a part of a distance learning strategy. With this book you will be capable of executing VIs. Virtual Instruments specially developed for the experiment in question providing you with great ability to control the remote instrument and to receive and present the desired experimental data. **Take-Home Physics: 65**

High-Impact, Low-Cost Labs Michael Horton, 2009-05-30 *Designing Stock Market Trading Systems* Bruce Vanstone, Tobias Hahn, 2010-08-23 In *Designing Stock Market Trading Systems* Bruce Vanstone and Tobias Hahn guide you through their tried and tested methodology for building rule based stock market trading systems using both fundamental and technical data. This book shows the steps required to design and test a trading system until a trading edge is found, how to use artificial neural networks and soft computing to discover an edge and exploit it fully. Learn how to build trading systems with greater insight and dependability than ever before. Most trading systems today fail to incorporate data from existing research into their operation. This is where Vanstone and Hahn's methodology is unique. Designed to integrate the best of past research on the workings of financial markets into the building of new trading systems, this synthesis helps produce stock market trading systems with unrivalled depth and accuracy. This book therefore includes a detailed review of key academic research showing how to test existing research, how to take advantage of it by developing it into a rule based trading system and how to improve it with artificial intelligence techniques. The ideas and methods described in this book have been tried and tested in the heat of the market. They have been used by hedge funds to build their trading systems. Now you can use them too. *Open Labs and Innovation Management* Valérie Mérindol, David W. Electromagnetic Processes Robert J. Gould,2020-07-21 This book provides an understanding of the theoretical foundations for the calculation of electromagnetic processes Photon production processes are particularly important in astrophysics since almost all of our knowledge of distant astronomical objects comes from the detection of radiation from these sources Further the conditions therein are extremely varied and a wide variety of naturally occurring electromagnetic phenomena can be described by limiting forms of the basic theory The first chapter reviews some basic principles that are the underpinnings for a general description of electromagnetic phenomena such as special relativity and especially relativistic covariance Classical and quantum electrodynamics QED are then formulated in the next two chapters followed by applications to three basic processes Coulomb scattering Compton scattering and bremsstrahlung These processes are related to other phenomena such as pair production and the comparisons are discussed A unique feature of the book is its thorough discussion of the nonrelativistic limit of QED which is simpler than the relativistic theory in its formulation and applications The methods of the relativistic theory are introduced and applied through the use of notions of covariance to provide a shorter path to the more general theory The book will be useful for graduate students working in astrophysics and

in certain areas of particle physics **Small Cities with Big Dreams** Greg Richards, Lian Duif, 2018-07-20 How can small cities make an impact in a globalizing world dominated by world cities and urban development strategies aimed at increasing agglomeration This book addresses the challenges of smaller cities trying to put themselves on the map attract resources and initiate development Placemaking has become an important tool for driving urban development that is sensitive to the needs of communities This volume examines the development of creative placemaking practices that can help to link small cities to external networks stimulate collaboration and help them make the most of the opportunities presented by the knowledge economy The authors argue that the adoption of more strategic holistic placemaking strategies that engage all stakeholders can be a successful alternative to copying bigger places Drawing on a range of examples from around the world they analyse small city development strategies and identify key success factors This book focuses on the case of s Hertogenbosch a small Dutch city that used cultural programming to link itself to global networks and stimulate economic cultural social and creative development It advocates the use of cultural programming strategies as a more flexible alternative to traditional top down planning approaches and as a means of avoiding copying the big city The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license Engineering Psychology and Human Performance Christopher D.
