The Unified Modeling Language Reference Manual James Rumbaugh, Ivar Jacobson, Grady Booch, 1999 Background UML concepts Reference Appendices *Unified Modeling Language Reference Manual, The, Second Edition* Grady Booch, 2004 *Software Engineering with Ada* Grady Booch, Douglas L. Bryan, Charles G. Petersen, 1994 Provides complete coverage of the Ada language and Ada programming in general by recognized authorities in Ada software engineering Demonstrates the power and performance of Ada in the management of large scale object oriented systems and shows how to use Ada features such as generics packages and tasking Implementing SOA Paul C. Brown, 2008-04-09 Putting Service Oriented Architecture SOA into Practice This book is a must have for enterprise architects implementing SOA Through practical examples it explains the relationship between business requirements business process design and service architecture By tying the SOA implementation directly to business value it reveals the key to ongoing success and funding Maja Tibbling Lead Enterprise Architect Con way Inc While there are other books on architecture and the implementation of ESB SOA and related technologies this new book uniquely captures the knowledge and experience of the real world It shows how you can transform requirements and vision into solid repeatable and value added architectures I heartily recommend it Mark Wencek SVP Consulting Services Alliances Ultimo Software Solutions Inc In his first book Succeeding with SOA Paul Brown explained that if enterprise goals are to be met business processes and information systems must be designed together as parts of a total architecture In this second book Implementing SOA he guides you through the entire process of designing and developing a successful total architecture at both project and enterprise levels Drawing on his own extensive experience he provides best practices for creating services and leveraging them to create robust and flexible SOA solutions Coverage includes Evolving the enterprise architecture towards an SOA while continuing to deliver business value on a project by project basis Understanding the fundamentals of SOA and distributed systems the dominant architectural issues and the design patterns for addressing them Understanding the distinct roles of project and enterprise architects and how they must collaborate to create an SOA Understanding the need for a comprehensive total architecture approach that encompasses business processes people systems data and infrastructure Understanding the strategies and tradeoffs for implementing robust secure high performance and high availability solutions Understanding how to incorporate business process management BPM and business process monitoring into the enterprise architecture Whether you re defining an enterprise architecture or delivering individual SOA projects this book will give you the practical advice you need to get the job done *Next Generation Information Technologies and Systems* Opher Etzion, Tsvi Kuflik, Amihai Motro, 2006-09-27 This book constitutes the refereed proceedings of the 6th International Workshop on Next Generation Information Technologies and Systems NGITS 2006 held in Kibbutz Shefayim Israel July 2006 The book presents 28 revised full papers and four revised short papers together with three invited papers Topical sections include information integration next generation applications

This book constitutes the refereed proceedings of the 4th International Conference on the Unified Modeling Language 2001 held in Toronto Canada in October 2001 The 33 revised full papers presented together with one invited paper were carefully reviewed and selected from a total of 122 abstracts and 102 papers submitted The papers are organized in topical sections on metamodeling activity diagrams OCL architecture and patterns analysis and testing performance and databases graph transformations real time and embedded systems associations and ontology statecharts components and use cases *UML*

Applied Martin L. Shoemaker,2004-04-01 *UML Applied* A NET Perspective is the first book to examine the two worlds of Unified Modeling Language UML and NET concurrently The core of this book provides a set of proven hands on team oriented exercises that will have you solving real world problems with UML faster than when using any other approach often in under a day Author Martin Shoemaker also demonstrates how to use Rational XDE for effective model driven development From the author In teaching UML to my students nothing has been as effective as Five Step UML a process I devised by stripping away one piece at a time everything that got in the way of learning UML Eventually I was left with five simple clear steps that show the students why and how to use UML by having them start the class by actually solving problems with UML After they learn the why and the how they re motivated to learn the what the details of the UML notation And they have a lot of fun in the process Now Im using Five Step UML to teach NET analysis and design in a larger framework I call it model driven development UML models as the central artifacts of the development process with other artifacts code tests documents even estimates and schedules all deriving from the models With this book I ve collected my Five Step UML and model driven development thoughts into one complete package I also give a UML perspective of the NET Common Language Runtime and the NET Framework providing a graphical overview that complements the online help **Creating Agile**

Business Systems with Reusable Knowledge A. Mitra,A. Gupta,2007-01-18 Agility and innovation are necessary to achieve global excellence and customer value in twenty first century business yet most approaches to business process engineering sacrifice these in favor of operational efficiency and economics Moreover the IT systems used to automate and encapsulate business processes are unresponsive to the dynamic business environment Mitra and Gupta provide insight to close this gap showing how innovation can be systematized with normalized patterns of information how business processes and information systems may be tightly aligned and how these processes and systems can be designed to automatically adapt to change by reconfiguring shared patterns of knowledge A modular approach to building business systems that parallels

that of object oriented software is presented Practical templates required for accelerating integration analysis and design are provided This book will appeal to consultants analysts and managers in IT as well as researchers and graduate students in business management and IT

Model Driven Architecture Uwe Aßmann,Mehmet Aksit,Arend Rensink,2005-08-18 Model Driven Architecture MDA is an initiative proposed by the Object Management Group OMG for platform generic software development MDA separates the specification of system functionality from the implementation on a specific platform It is aimed at making software assets more resilient to changes caused by emerging technologies While stressing the importance of modeling the MDA initiative covers a wide spectrum of research areas Further efforts are required to bring them into a coherent approach based on open standards and supported by matured tools and techniques

This volume contains the selected papers of two workshops on Model Driven Architecture Foundations and Applications MDAFA MDAFA 2003 held at the University of Twente Twente The Netherlands June 26 27 2003 and MDAFA 2004 held at Linköping University Linköping Sweden June 10 11 2004 The goal of the workshops was to understand the foundations of MDA to share experience in applying MDA techniques and tools and to outline future research directions The workshops organizers encouraged authors of accepted papers to resubmit their papers to a post workshop reviewing process 15 of these papers were accepted to appear in this volume on MDA

Design of Flexible Production Systems Tullio Tolio,2008-12-11 In the last decade the production of mechanical components to be assembled in final products produced in high volumes e.g cars mopeds industrial vehicles etc has undergone deep changes due to the overall modifications in the way companies compete Companies must consider competitive factors such as short lead times tight product tolerances frequent market changes and cost reduction Anyway companies often have to define production objectives as trade offs among these critical factors since it can be difficult to improve all of them Even if system flexibility is often considered a fundamental requirement for firms it is not always a desirable characteristic of a system because it requires relevant investment cost which can jeopardize the profitability of the firm Dedicated systems are not able to adapt to changes of the product characteristics while flexible systems offer more flexibility than what is needed thus increasing investment and operative costs Production contexts characterized by mid to high demand volume of well identified families of products in continuous evolution do not require the highest level of flexibility therefore manufacturing system flexibility must be rationalized and it is necessary to find out the best trade off between productivity and flexibility by designing manufacturing systems endowed with the right level of flexibility required by the production problem This new class of production systems can be named Focused Flexibility Manufacturing Systems FFMSs The flexibility degree in FFMSs is related to their ability to cope with volume mix and technological changes and it must take into account both present and future changes The required level of system flexibility impacts on the architecture of the system and the explicit design of flexibility often leads to hybrid systems i.e. automated integrated systems in which parts can be processed by both general purpose and dedicated machines This is a key issue of

FFMSs and results from the matching of flexibility and productivity that respectively characterize FMSs and Dedicated Manufacturing Systems DMSs The market share of the EU in the machine tool sector is 44% the introduction of focused flexibility would be particularly important for machine tool builders whose competitive advantage is based on the ability of customizing their systems on the basis of needs of their customers In fact even if current production contexts frequently present situations which would fit well with the FFMS approach tradition and know how of machine tool builders play a crucial role Firms often agree with the focused flexibility vision nevertheless they decide not to pay the risk and efforts related to the design of this new system architecture This is due also to the lack of well structured design approaches which can help machine tool builders to configure innovative systems Therefore the FFMS topic is studied through the book chapters following a shared mission To define methodologies and tools to design production systems with a minimum level of flexibility needed to face during their lifecycle the product and process evolution both in the technological and demand aspects The goal is to find out the optimal trade off between flexibility and productivity The book framework follows the architecture which has been developed to address the FFMS Design problem This architecture is both broad and detailed since it pays attention to all the relevant levels in a firm hierarchy which are involved in the system design Moreover the architecture is innovative because it models both the point of view of the machine tool builder and the point of view of the system user The architecture starts analyzing Manufacturing Strategy issues and generating the possible demand scenario to be faced Technological aspects play a key role while solving process plan problems for the products in the part family Strategic and technological data becomes input when a machine tool builder performs system configuration The resulting system configurations are possible solutions that a system user considers when planning its system capacity All the steps of the architecture are deeply studied developing methods and tools to address each subproblem Particular attention is paid to the methodologies adopted to face the different subproblems mathematical programming stochastic programming simulation techniques and inverse kinematics have been used The whole architecture provides a general approach to implement the right degree of flexibility and it allows to study how different aspects and decisions taken in a firm impact on each other The work presented in the book is innovative because it gives links among different research fields such as Manufacturing Strategy Process Plan System Design Capacity Planning and Performance Evaluation moreover it helps to formalize and rationalize a critical area such as manufacturing system flexibility The addressed problem is relevant at an academic level but also at an industrial level A great deal of industrial sectors need to address the problem of designing systems with the right degree of flexibility for instance automotive white goods electrical and electronic goods industries etc Attention to industrial issues is confirmed by empirical studies and real case analyses which are presented within the book chapters

Networks Daniel Hardy, Guy Malleus, Jean-Noel Mereur, 2013-12-18 Revolution transformation upheaval and promise Yesterday the technologies of communication were accessible only to experts today they are a subject of constant discussion in the media New services are advertised on a daily basis and the potential realized or not of these technologies is a constant source of comment and discussion But beyond the media frenzy things really are developing with increasing speed driven by the power of the Internet The network has built up an ongoing relationship between research centres development teams and marketing teams allowing a constructive collaboration between technologies The network has become the catalyst for its own evolution The arrival of IP and GSM has given rise to new corporate giants like Cisco Systems and Nokia Operators witnessing the diversification of their main sources of revenue have been forced to merge or split Entirely new actors from various horizons are counting on their ability to act as operators without a network to their name Traditional equipment manufacturers have had to rethink their product lines in view of these new foundations Likewise governments have understood the need to create a body of laws that promote the harmonious and rapid development of networks to offer alternatives for operators and service providers These often complex regulations act both as constraint and opportunity for operators and give direction to the actions of actors across the board
