International Journal of Innovation Management There is no doubt that digital technologies have the potential for disruptive innovation in a wide range of sectors both in manufacturing and services and the commercial and social domains However popular commentaries on the potential of digital innovation to disrupt have suffered from two extreme positions either simplistic technological determinism often promoted by technology vendors claiming that the impending widespread automation of products and services will provide step changes in productivity and new products and services or alternatively very high level broad discussions of business model innovation in traditional sectors private and public However the impacts

will not be universal and the outcomes will be highly differentiated More fundamentally neither a narrow technological perspective or broad business view adequately captures the appropriate level of granularity necessary to understand the potential and challenges presented by digital innovation In this book Digital Disruptive Innovation we apply innovation concepts models and research to provide greater insights into strategies for and management of digital innovation
