Gravitational N-Body Simulations Sverre J. Aarseth, 2003-10-23 This book discusses in detail all the relevant numerical methods for the classical N body problem. It demonstrates how to develop clear and elegant algorithms for models of gravitational systems and explains the fundamental mathematical tools needed to describe the dynamics of a large number of mutually attractive particles. Particular attention is given to the techniques needed to model astrophysical phenomena such as close encounters and the dynamics of black hole binaries. The author reviews relevant work in the field and covers applications to the problems of planetary formation and star cluster dynamics both of Pleiades type and globular clusters. Self contained and pedagogical this book is suitable for graduate students and researchers in theoretical physics astronomy and cosmology.

The Organization of Reduction, Data Flow, and Control Flow Systems Werner Kluge, 1992 In light of research over the last decade on new ways of representing and performing computations this book provides a timely reexamination of computer organization and computer architecture. It systematically investigates the basic organizational concepts of reduction data flow and control flow or state transition and their relationship to the underlying programming paradigms. For each of these concepts Kluge looks at how principles of language organization translate into architectures and how architectural features translate into concrete system implementations comparing them in order to identify their similarities and differences. The focus is primarily on a functional programming paradigm based on a full fledged operational calculus and on its realization by various reduction systems. Kluge first presents a brief outline of the overall configuration of a computing system and of an operating system kernel. He introduces elements of the theory of Petri nets as modeling tools for nonsequential systems and processes and uses a simple form of higher order Petri nets to identify by means of examples the operational and control disciplines that govern the organization of reduction data flow and control flow computations. He then introduces the notions of abstract algorithms and of reductions and includes an overview of the theory of the calculus. The next five chapters describe the various computing engines that realize the reduction semantics of a full fledged calculus. The remaining chapters provide self contained investigations of the G machine SKI combinator reduction and the data flow approach for implementing the functional programming paradigm. This is followed by a detailed description of a typical control flow or von Neumann machine architecture a VAX11 system. Properties of these machines are summarized in the concluding chapter which classifies them according to the semantic models they support.

Analysis the authors present sound principles and useful methods for making investment and risk management decisions in the presence of hedgeable and non hedgeable risks using the simplest possible principles methods and models that still capture the essential features of the real world problems They use rigorous yet elementary mathematics avoiding technically advanced approaches which have no clear methodological purpose and are practically irrelevant The material progresses systematically and topics such as the pricing and hedging of derivative contracts investment and hedging principles from portfolio theory and risk measurement and multivariate models from risk management are covered appropriately The theory is combined with numerous real world examples that illustrate how the principles methods and models can be combined to approach concrete problems and to draw useful conclusions Exercises are included at the end of the chapters to help reinforce the text and provide insight This book will serve advanced undergraduate and graduate students and practitioners in insurance finance as well as regulators Prerequisites include undergraduate level courses in linear algebra analysis statistics and probability
