Labor, Credit, and Goods Markets Nicolas Petrosky-Nadeau,Etienne Wasmer,2017-11-10 An integrated framework to study the theoretical and quantitative properties of economies with frictions in labor financial and goods markets This book

offers an integrated framework to study the theoretical and quantitative properties of economies with frictions in multiple markets Building on analyses of markets with frictions by 2010 Nobel laureates Peter A Diamond Dale T Mortensen and Christopher A Pissarides which provided a new theoretical approach to search markets the book applies this new paradigm to labor finance and goods markets It shows in particular how frictions in different markets interact with each other The book first covers the main developments in the analysis of the labor market in the presence of frictions offering a systematic analysis of the dynamics of this environment and explaining the notion of macroeconomic volatility Then building on the generality and simplicity of the search analysis the book adapts it to other markets developing the tools and concepts to analyze friction in these markets The book goes beyond the traditional general equilibrium analysis of markets which is often frictionless It begins with the standard analysis of a single market and then sequentially integrates more markets into the analysis progressing from labor to financial to goods markets Along the way the book provides a number of useful results and insights including the existence of a direct link between search frictions and the degree of volatility in the economy TSA Bulletin Traffic Safety Association of Detroit,1962
