

SOLVING LINEAR SYSTEMS ALGEBRAICALLY

ALGEBRAIC METHODS

SUBSTITUTION

- Solve one equation for a variable.
- Substitute the expression from step 1 into the opposite equation in place of that variable.
- Solve the equation.
- Substitute the solution from step 3 into an original equation and solve to find the second variable.
- Write your solution as an ordered pair.

Example:

$$x + 7y = 0$$

$$2x - 8y = 22$$

$$\begin{aligned} x &= -7y \\ 2(-7y) - 8y &= 22 \\ -14y - 8y &= 22 \\ -22y &= 22 \\ y &= -1 \end{aligned}$$

$$\begin{aligned} x + 7(-1) &= 0 \\ x - 7 &= 0 \\ x &= 7 \end{aligned}$$

Solution: (7, -1)

ELIMINATION

- Arrange both equations in the form $Ax + By = C$.
- Multiply one or both equations to produce a variable that will cancel out.
- Add the two equations together and solve for a variable.
- Substitute the solution from step 3 into an original equation and solve to find the second variable.
- Write your solution as an ordered pair.

Example:

$$6x - 12y = 24$$

$$2x + 6y = 40 \text{ or } 6$$

$$\begin{aligned} 6x - 12y &= 24 \\ + 2x + 6y &= 24 \\ -40y &= -40 \\ y &= 1 \end{aligned}$$

$$\begin{aligned} 6x - 12(1) &= 24 \\ 6x + 12 &= 24 \\ 6x &= 12 \\ x &= 2 \end{aligned}$$

Solution: (2, 1)

1 and 2 are the most efficient methods for solving the system $x + 7y = 0$ and $2x - 8y = 22$.

SUBSTITUTION - Can one of the equations be solved for x or y in one step or less?

ELIMINATION - Are both equations in the form $Ax + By = C$? Or can we rearrange them to be that form in one step or less?

Identify the most efficient method for solving the system. Then solve the system.

1 $y = 4x - 9$ method: substitution
 $x = x - 3$

$$\begin{aligned} x - 3 &= 4x - 9 \\ -3 &= 3x - 9 \\ 6 &= 3x \\ 2 &= x \end{aligned}$$

$$\begin{aligned} y &= 4(2) - 9 \\ y &= 8 - 9 \\ y &= -1 \end{aligned}$$

Solution: (2, -1)

2 $4x + 2y = 10$ method: substitution
 $x = y + 13$

$$\begin{aligned} x &= y + 13 \\ 4(y + 13) + 2y &= 10 \\ 4y + 52 + 2y &= 10 \\ 6y + 52 &= 10 \\ 6y &= -42 \\ y &= -7 \end{aligned}$$

$$\begin{aligned} x &= (-7) + 13 \\ x &= 7 + 13 \\ x &= 6 \end{aligned}$$

Solution: (6, -7)

Algebraic Modeling Systems Josef Kallrath, 2012-02-16 This book Algebraic Modeling Systems Modeling and Solving Real World Optimization Problems deals with the aspects of modeling and solving real world optimization problems in a unique combination It treats systematically the major algebraic modeling languages AMLs and modeling systems AMLs used to solve mathematical optimization problems AMLs helped significantly to increase the usage of mathematical optimization in industry Therefore it is logical consequence that the GOR Gesellschaft f r Operations Research Working Group Mathematical Optimization in Real Life had a second meeting devoted to AMLs which after 7 years

followed the original 71st Meeting of the GOR Gesellschaft für Operations Research Working Group Mathematical Optimization in Real Life which was held under the title Modeling Languages in Mathematical Optimization during April 23-25 2003 in the German Physics Society Conference Building in Bad Honnef Germany While the first meeting resulted in the book Modeling Languages in Mathematical Optimization this book is an offspring of the 86th Meeting of the GOR working group which was again held in Bad Honnef under the title Modeling Languages in Mathematical Optimization

Structures in Natural Language Shalom Lappin, Jean-Philippe Bernardy, 2022-12-23 Algebraic Structures in Natural Language addresses a central problem in cognitive science concerning the learning procedures through which humans acquire and represent natural language Until recently algebraic systems have dominated the study of natural language in formal and computational linguistics AI and the psychology of language with linguistic knowledge seen as encoded in formal grammars model theories proof theories and other rule driven devices Recent work on deep learning has produced an increasingly powerful set of general learning mechanisms which do not apply rule based algebraic models of representation The success of deep learning in NLP has led some researchers to question the role of algebraic models in the study of human language acquisition and linguistic representation Psychologists and cognitive scientists have also been exploring explanations of language evolution and language acquisition that rely on probabilistic methods social interaction and information theory rather than on formal models of grammar induction This book addresses the learning procedures through which humans acquire natural language and the way in which they represent its properties It brings together leading researchers from computational linguistics psychology behavioral science and mathematical linguistics to consider the significance of non algebraic methods for the study of natural language The text represents a wide spectrum of views from the claim that algebraic systems are largely irrelevant to the contrary position that non algebraic learning methods are engineering devices for efficiently identifying the patterns that underlying grammars and semantic models generate for natural language input There are interesting and important perspectives that fall at intermediate points between these opposing approaches and they may combine elements of both It will appeal to researchers and advanced students in each of these fields as well as to anyone who wants to learn more about the relationship between computational models and natural language Resources in Education ,2001-10 **Key Ideas in Teaching Mathematics** Anne Watson, Keith Jones, Dave Pratt, 2013-02-21 Big ideas in the mathematics curriculum for older school students especially those that are hard to learn

and hard to teach are covered in this book It will be a first port of call for research about teaching big ideas for students from 9 19 and also has implications for a wider range of students These are the ideas that really matter that students get stuck on and that can be obstacles to future learning It shows how students learn why they sometimes get things wrong and the strengths and pitfalls of various teaching approaches Contemporary high profile topics like modelling are included The authors are experienced teachers researchers and mathematics educators and many teachers and researchers have been involved in the thinking behind this book funded by the Nuffield Foundation An associated website hosted by the Nuffield
