Chapter 4 Solutions

- 4.1 (A) During compression and expansion, the air does not leave the volume so it is analyzed as a system, not a control volume.
- 4.2 (D) The other parts represent time-varying flows.
- 4.3 (B) When using this continuity equation, the area at Section 2 will be different than the area at Section 1. The diameter typically changes from section 1 to section 2.
- 4.4 (D) We will use V to represent velocity in most problem solutions in this chapter, since the equation editor doesn't allow a different font. Since systems are not of interest in this chapter, the volume doesn't appear except in Section 4.3 on transient flows. Use Table C-3:

$$\rho_1 A_1 V_1 = \rho_2 A_2 V_2 \quad \frac{1}{0.07341} \frac{\text{kg}}{\text{m}^3} \times 40 \frac{\text{m}}{\text{s}} = \frac{1}{0.114} \frac{\text{kg}}{\text{m}^3} \times V_2 \quad \therefore V_2 = \underline{62.1 \text{ m/s}}$$

- 4.5 (A) Put all distances in meters to be safe. Then

$$A_1 V_1 = A_2 V_2 \quad (\pi \times 0.01^2) \times 20 = (2\pi \times 0.1 \times 0.002) \times V_2 \quad \therefore V_2 = \underline{5 \text{ m/s}}$$

- 4.6 (C) The pump work W_p is related to the shaft work by $\dot{W}_p = -\dot{W}_s$. With no losses, the

temperature remains unchanged so the internal energy change is zero and Eq. 4.18 provides response (C).

- 4.7 (B) Eq. 4.19 simplifies to $0 = -h + \frac{V_2^2 - V_1^2}{2}$. Using $h_2 - h_1 = C_p (T_2 - T_1)$,

$$T_2 - T_1 = \frac{V_1^2 - V_2^2}{2C_p} = \frac{(180^2 - 20^2) \text{ m}^2/\text{s}^2}{2 \times 1000 \text{ J/kg} \cdot ^\circ\text{C}} = \underline{16^\circ\text{C}}$$

where we used $C_p = 1000 \text{ J/kg} \cdot ^\circ\text{C}$. Recall that the units convert as

and are rarely accounted for in traditional economic systems. The failure to appropriately consider the full economic value of ecosystem services in decision making enables the continued degradation and loss of ecosystems and biodiversity. Most ecosystem services are considered public goods and tend to be overexploited by society. Many methods have been applied to the economic valuation of ecosystem services. The use of these methods as well as the interpretation of their results requires familiarity with the ecological, political, normative and socio-economic context and the science of economics. Recognizing, demonstrating and capturing the value of ecosystem services can play an important role in setting policy directions for ecosystem management and conservation and thus in increasing the provision of ecosystem services and their contributions to human well-being. The aim of this manual is to enhance understanding of ecosystem services and their valuation. The specific target group comprises governmental officers in planning units and field level officers and practitioners in key government departments in Bangladesh responsible for project development including the Ministry of Environment and Forests and its agencies. Most of the examples and case studies presented herein therefore are tailored to the Bangladesh context but the general concepts, approaches and methods can be applied to a broad spectrum of situations. This manual focuses on valuing forest-related ecosystem services including those provided by trees outside forests. It is expected to improve valuation efforts and help ensure the better use of such values in policymaking and decision making. Among other things, the manual explores the basics of financial mathematics, e.g. the time value of money, discounting, cost-benefit analysis and profitability and risk indicators, the main methods of economic valuation, examples of the valuation of selected ecosystem services and inputs for considering values in decision making.

Solutions Manual for Principles of Physical Chemistry, 3rd Edition, Solutions Manual Hans Kuhn, David H. Waldeck, Horst-Dieter Försterling, 2024-10-25. This is a Solutions Manual to accompany with solutions to the exercises in the main volume of Principles of Physical Chemistry Third Edition. This book provides a unique approach to introduce undergraduate students to the concepts and methods of physical chemistry which are the foundational principles of Chemistry. The book introduces the student to the principles underlying the essential sub-fields of quantum mechanics, atomic and molecular structure, atomic and molecular spectroscopy, statistical thermodynamics, classical thermodynamics, solutions and equilibria, electrochemistry, kinetics and reaction dynamics, macromolecules and organized molecular assemblies. Importantly, the book develops and applies these principles to supramolecular assemblies and supramolecular machines with many examples from biology and nanoscience. In this way, the book helps the student to see the frontier of modern physical chemistry developments. The book begins with a discussion of wave-particle duality and proceeds systematically to more complex chemical systems in order to relate the story of physical chemistry in an intellectually coherent manner. The topics are organized to correspond with those typically given in each of a two-course semester sequence. The first 13 chapters present quantum mechanics and spectroscopy to describe and predict the structure of matter, atoms, molecules and solids. Chapters 14 to 29 present statistical thermodynamics and kinetics and

applies their principles to understanding equilibria chemical transformations macromolecular properties and supramolecular machines Each chapter of the book begins with a simplified view of a topic and evolves to more rigorous description in order to provide the student and instructor flexibility to choose the level of rigor and detail that suits them best The textbook treats important new directions in physical chemistry research including chapters on macromolecules principles of interfaces and films for organizing matter and supramolecular machines as well as including discussions of modern nanoscience spectroscopy and reaction dynamics throughout the text

VBA Excel Programming Ray Lee, 2013-06 Attention Please purchase the ebook at the following link <https://www.copysafe.net/shop/prod.asp/prod/103671/Cat/73> Google Books is only an intermediary in terms of sales and especially of this ebook's proprietary format and it's much better to buy the ebook at the link rather than here If you work with numeric data in Excel and constantly run into data problems that take too long to fix you should think about using VBA to speed through your problems This is a formal and practical training guide that takes you from syntax rules to contextual illustrations the most frequently used objects and useful concepts are exposed to show you how they might be used in the real world Time saving shortcuts syntax subtleties and programming implications are thoroughly annotated This ebook gives more than basic demonstrations of syntax usage a strong focus is given to Excel object manipulations and these operations are covered in complete sets of operations while it's meaningful to show how to delete a column but a corporate problem typically requires you to find multiple columns that match some criteria before deleting them so it's more meaningful if a demonstration shows how you might go about solving the problem from start to finish rather than showing a few lines of code for only the deletion itself this ebook gives such comprehensive content The typical Excel user doesn't need to create overly complex solutions for this reason this manual doesn't cover peripheral topics that either extend VBA's reach or substitute it in impractical ways This ebook is not too trivial but not too heavy either topic wise and computationally VBA is a simple programming language but the complexity of writing intelligent and reusable code is still a hurdle ultimately you need to tell VBA what to do for it to do its magic this is where the challenge is this manual helps overcome that discounted complexity
