

Solution:

$f_o = 0.5 \text{ cm}$, tube length = 6.5 cm

magnification power = 100

Here $v_o + f_e = 6.5$

$$\therefore v_o = 6.5 - f_e \text{ ----- (1)}$$

$$\text{magnification power} = m_o m_e = \frac{v_o}{u_o} \times \frac{D}{f_e}$$

$$m = - \left[1 - \frac{v_o}{f_o} \right] \frac{D}{f_e}$$

$$100 = - \left[1 - \frac{v_o}{0.5} \right] \times \frac{25}{f_e} \quad [\text{Take } D = 25 \text{ cm}]$$

$$100 f_e = -[1 - 2v_o] \times 25$$

$$4 f_e = -1 + 2v_o$$

$$2v_o - 4f_e = 1 \text{ ----- (2)}$$

Substitute equation (1) in equation (2)

$$2(6.5 - f_e) - 4 f_e = 1$$

$$13 - 2f_e - 4 f_e = 1$$

$$\therefore f_e = 2 \text{ cm}$$

$\therefore$ Focal length of the eyepiece is 2 cm.

Rousseau, J. P. Mathieu, 2013-10-22 This collection of problems and accompanying solutions provide the reader with a full introduction to physical optics The subject coverage is fairly traditional with chapters on interference and diffraction and there is a general emphasis on

spectroscopy **Concise Optics** Ajawad I. Haija, M. Z. Numan, W. Larry Freeman, 2018-02-21 This introductory text is a reader friendly treatment of geometrical and physical optics emphasizing problems and solved examples with detailed analysis and helpful commentary The authors are seasoned educators with decades of experience teaching optics Their approach is to gradually present mathematics explaining the physical concepts It covers ray tracing to the wave nature of light and introduces Maxwell's equations in an organic fashion The text then moves on to explain how to analyze simple optical systems such as spectacles for improving vision microscopes and telescopes while also being exposed to contemporary research topics Ajawad I Haija is a professor of physics at Indiana University of Pennsylvania M Z Numan is professor and chair of the department of physics at Indiana University of Pennsylvania W Larry Freeman is Emeritus Professor of Physics at Indiana University of Pennsylvania **The Monte Carlo Methods in Atmospheric Optics** G.I. Marchuk, G.A. Mikhailov, M.A. Nazareliev, R.A. Darbinjan, B.A. Kargin, B.S. Elepov, 2013-04-17 This monograph is devoted to urgent questions of the theory and applications of the Monte Carlo method for solving problems of atmospheric optics and hydrooptics The importance of these problems has grown because of the increasing need to interpret optical observations and to estimate radiative balance precisely for weather forecasting Inhomogeneity and sphericity of the atmosphere absorption in atmospheric layers multiple scattering and polarization of light all create difficulties in solving these problems by traditional methods of computational mathematics Particular difficulty arises when one must solve nonstationary problems of the theory of transfer of narrow beams that are connected with the estimation of spatial location and time characteristics of the radiation field The most universal method for solving those problems is the Monte Carlo method which is a numerical simulation of the radiative transfer process This process can be regarded as a Markov chain of photon collisions in a medium which result in scattering or absorption The Monte Carlo technique consists in computational simulation of that chain and in constructing statistical estimates of the desired functionals The authors of this book have contributed to the development of mathematical methods of simulation and to the interpretation of optical observations A series of general methods using Monte Carlo techniques has been developed The present book includes theories and algorithms of simulation Numerical results corroborate the possibilities and give an impressive prospect of the applications of Monte Carlo methods **1000 Solved Problems in Classical Physics** Ahmad A. Kamal, 2011-03-18 This book basically caters to the needs of undergraduates and graduates physics students in the area of classical physics specially Classical Mechanics and Electricity and Electromagnetism Lecturers Tutors may use it as a resource book The contents of the book are based on the syllabi currently used in the undergraduate courses in USA U K and other countries The book is divided into 15 chapters each chapter beginning with a brief but adequate summary and necessary formulas and Line diagrams followed by a variety of typical problems useful for assignments and exams Detailed solutions are provided at the end of each chapter
