The Rock Cycle

The rock cycle is a process that shows how rocks can change over time. It starts with rocks breaking down into smaller pieces through weathering and being carried away by erosion. These small pieces compact into sedimentary rocks. With heat and pressure, these sedimentary rocks can transform into metamorphic rocks. If the rocks melt and cool down, they can become igneous rocks. This cycle keeps repeating over millions of years.

Fossils

Fossils are the remains or traces of plants and animals that lived long ago. By studying fossils found in different rock layers, scientists can make inferences about what the Earth was like a long time ago.
