Rehabilitation A Guide for Health Professionals is a concise reference for the health professional looking to further understand sleep and how sleep science may impact particular areas of various rehabilitation disciplines. Dr Julie M Hereford and her contributors present Sleep and Rehabilitation A Guide for Health Professionals in an easy to read manner by dividing the text into four main sections. The first section provides a review of the basic scientific understanding of sleep. While there are many other publications that present a basic scientific understanding of sleep, Sleep and Rehabilitation systematically gears this information toward the rehabilitation professional with commonly used terminology, descriptions of sleep architecture and information concerning sleep hygiene. The middle sections of Sleep and Rehabilitation describe disordered sleep and how it pertains to patients seen in the rehabilitation setting. It guides the health professional to recognize the manifestations and consequences of disordered sleep and teaches the rehabilitation professional how to interpret a sleep study in order to provide guidance in clinical decision making. Finally, the last section of Sleep and Rehabilitation provides the ever important practical application of the theoretical principles in sleep rehabilitation. Features include: Discussion on the science of polysomnography; Sleep and sleep dysfunction from a rehabilitation perspective; Sleep dysfunction as it relates to the clinical needs of a patient undergoing the rehabilitation process; Discussion on the particular concerns that sleep and sleep dysfunction can hold for rehabilitation patients and issues to be addressed by the provider; Presentation of unique issues that disordered sleep may present in the rehabilitation process such as on pain, pain management, motor learning and memory and performance enhancement; Tools to assess quality and quantity of a patient's sleep; Discussion on methods in which sleep may be manipulated in order to optimize a patient's physical performance. Sleep and Rehabilitation A Guide for Health Professionals is a one of a kind reference that will help the health professional incorporate the science of sleep into the rehabilitation process.

Second Handbook of Research on Mathematics Teaching and Learning Frank K. Lester, 2007-02-01. The audience remains much the same as for the 1992 Handbook, namely mathematics education researchers and other scholars conducting work in mathematics education. This group includes college and university faculty, graduate students, investigators in research and development centers, and staff members at federal, state, and local agencies that conduct and use research within the discipline of mathematics. The intent of the authors of this volume is to provide useful perspectives as well as pertinent information for conducting investigations that are informed by previous work. The Handbook should also be a useful textbook for graduate research seminars. In addition to the audience mentioned above, the present Handbook contains chapters that should be relevant to four other groups: teacher educators, curriculum developers, state and national policy makers, and test developers, and others involved with assessment. Taken as a whole, the chapters reflect the mathematics education research community's willingness to accept the challenge of helping the public understand what mathematics education research is all about and what the relevance of their research findings might be for those outside their immediate community.
