Chapter 1

- Scientific Methods

- Fact- generally a close agreement by competent observers who make a series of observations about the same phenomenon
- Hypothesis- an educated guess that is only presumed to be factual until supported by experiment
 - To distinguish whether a hypothesis is scientific or not, check to see if there is a test for proving it wrong; if there is no test, then it is not scientific
- Law- when a hypothesis has been tested over and over again and has not been contradicted
- Theory- a synthesis of a large body of information that encompasses well-tested and verified hypotheses about certain aspects of the natural world
 - Evolve as they go through stages of redefinition and refinement

Chapter 2- Newton's First Law of Motion- Inertia

- Aristotle on Motion

- Aristotle divided motion into two main classes: natural motion and violent motion
 - Natural motion
 - Proceeds from the "nature" of an object, dependent on the combination of the four elements (earth, water, air, and fire)
 - Every object in the universe has a proper place, determined by its "nature"; any object not in its proper place will "strive" to get there
 - Violent motion
 - Results from pushing or pulling forces; imposed motion
- Taught that all motions are due to the nature of the moving object or due to a sustained push or pull

- Galileo's Experiments

- Leaning Tower
 - Galileo easily demolished Aristotle's falling body hypothesis
 - Dropped objects of various weights from the top of the Leaning Tower of Pisa to compare their falls
 - Found that a stone twice as heavy as another did not fall twice as fast
 - Except for the small effect of air resistance, objects of various weights,
