

STUDY GUIDE FOR BACTERIA AND VIRUSES

Answers too, important words underlined.

1. Identify structures A – F.

- A. Cell Wall, made of Peptidoglycan in Eubacteria, Archaeobacteria uses a different substance.
- B. Cell Membrane, note that all cells have a cell membrane
- C. Plasmid, small circle or loop of DNA. This is the genetic material that bacteria exchange in Conjugation (a form of sexual reproduction where bacteria exchange plasmids but DO NOT go thru meiosis.)
- D. Pili, these help the bacteria stick to surfaces.
- E. DNA
- F. Flagellum (plural – flagella)

2. Identify the structures that are different between eubacteria and archaeobacteria.

The cell wall is made of different material (peptidoglycan) some of the lipids are different. Other chemical and genetic differences lead us to believe that archaeobacteria are the true ancestors of Eukaryote cells and that organelles found in Eukaryote cells like the mitochondria and chloroplasts are the remnants of symbiotic bacteria that infected cells soon after life began.

3. Name and describe the 3 shapes of bacteria.

- Bacillus – rod shaped.
- Coccus – sphere shaped
- Spirilla - spiral

4. Name several ways to kill bacteria.

Disrupt the chemical processes of the bacteria, destroy the cell walls, or destroy the cell membranes. Antibiotics do these when you are sick. See number 10. Often times antibiotics kill the good as well as the bad viruses and give you diarrhea.
