Vision Art Updated Expanded Edition:

Vision and Art (Updated and Expanded Edition) Margaret S. Livingstone, 2022-05-03 With the original release of Vision and Art in 2002 Harvard professor Margaret Livingstone successfully bridged the gap between science and art exploring how great painters fool the brain why Mona Lisa's smile seems so mysterious or Monet's Poppy Field appears to sway In the revised and expanded edition Livingstone presents two new chapters of her latest observations has substantially expanded other chapters and updates the rest of the existing text with new insights gleaned from her ongoing research bringing the book to the cutting edge in the field of neuroscience Accompanying Livingstone's lively prose are many charts and diagrams that lucidly illustrate her points as well as in depth analyses of the phenomena found in major works of art Be it the explanation of common optical illusions or the breakdown of techniques painters use to create those illusions Vision and Art provides a wealth of information for artists scholars and scientists alike Vision and Art (Updated and Expanded Edition) Margaret S. Livingstone, 2014-03-25 A Harvard neurobiologist explains how vision works citing the scientific origins of artistic genius and providing coverage of such topics as optical illusions and the correlation between learning disabilities and artistic skill

Feature Extraction and Image Processing for Computer Vision Mark Nixon, Alberto Aguado, 2019-11-17 Feature Extraction for Image Processing and Computer Vision is an essential guide to the implementation of image processing and computer vision techniques with tutorial introductions and sample code in MATLAB and Python Algorithms are presented and fully explained to enable complete understanding of the methods and techniques demonstrated As one reviewer noted The main strength of the proposed book is the link between theory and exemplar code of the algorithms Essential background theory is carefully explained This text gives students and researchers in image processing and computer vision a complete introduction to classic and state of the art methods in feature extraction together with practical guidance on their implementation The only text to concentrate on feature extraction with working implementation and worked through mathematical derivations and algorithmic methods A thorough overview of available feature extraction methods including essential background theory shape methods texture and deep learning Up to date coverage of interest point detection feature extraction and description and image representation including frequency domain and colour Good balance between providing a mathematical background and practical implementation Detailed and explanatory of algorithms in MATLAB and Python
