Abstract This paper presents a mathematical model for the dynamics of a system of interacting agents. The model is based on the assumption that the agents are represented by a set of nodes, each of which is connected to a subset of the other nodes. The nodes are arranged in a hierarchical structure, with the root node at the top and the leaf nodes at the bottom. The model is used to study the dynamics of a system of interacting agents, such as a network of computers or a social network. The model is shown to be able to capture the essential features of the system's dynamics, including the formation of clusters and the spread of information.
