Many of them however live in urban and highly developed suburban areas that are heavily light polluted. Due to this light pollution they are under the impression that deep sky objects, nebulae, galaxies, star clusters are either invisible or not worth viewing from home. This book describes the many objects that can be seen in a bright urban sky and shows the city or suburban astronomer how to observe object after object season after season. This book covers the why, how, and what of astronomy under light polluted skies. The prospective city-based observer is told why to observe from home; there are hundreds of spectacular objects to be seen from the average urban site; how to observe; the city sky telescopes, accessories, and modern techniques; and what to observe. About 50% of the book is devoted to describing tours of the sky with physical and observational descriptions, at the eyepiece, drawings, and photographs. *Shoot the Moon* Nicolas Dupont-Bloch, 2016-09-26 The Moon boasts an unexpected variety of landscapes including volcanic features, sinuous valleys, and ghost craters which are readily visible from Earth. This practical guide explains and demonstrates how you can capture impressive images of our nearest neighbour in space using a variety of different techniques. As the first guide to be dedicated to modern lunar imaging, this volume offers an in-depth and illustrated approach to common optics, the essentials of digital imaging, imaging devices, and image processing software. Even in light polluted areas, the countless features and finest details of the Moon can be captured by following the instructions in this comprehensive and accessible guide.
