Energy Efficiency and Renewable Energy Through Nanotechnology Ling Zang,2011-09-06 Reflecting the rapid growth of nanotechnology research and the potential impact of the growing energy crisis Energy Efficiency and Renewable Energy Through Nanotechnology provides comprehensive coverage of cutting edge research in the energy related fields of nanoscience and nanotechnology which aim to improve energy efficiency and the generation of renewable energy Energy Efficiency and Renewable Energy Through Nanotechnology tightly correlates nanotechnology with energy issues in a general comprehensive way that makes it not only suitable as a desk reference for research but also as a knowledge resource for the non expert general public Readers will find Energy Efficiency and Renewable Energy Through Nanotechnology useful in a variety of ways ranging from the creation of energy policy to energy research development and to education in nanotechnology and its application to energy related problems It can also be used as a primary or supplementary textbook for energy related courses for advanced undergraduate and graduate students **Cylindrical Liner Z-pinches as Drivers for Converging Strong Shock Experiments** Guy C. Burdiak,2014-06-06 The thesis represents the development of an

entirely new experimental platform for generating and studying converging radiative shock waves It was discovered that the application of large magnetic pressures to gas filled cylindrical metallic tubes could sequentially produce three shocks within the gas A comprehensive set of instrumentation was devised to explore this system in detail and an exceptionally thorough experimental and theoretical study was carried out in order to understand the source of the shock waves and their dynamics The research is directed towards some of the most interesting topics in high energy density physics HEDP today namely the interaction of HED material with radiation and magnetic fields with broad applications to inertial confinement fusion ICF and laboratory plasma astrophysics The work has already generated significant international interest in these two distinct research areas and the results could have significant importance for magnetic ICF concepts being explored at Sandia National Laboratories in the US and for our understanding of the very strong shock waves that are ubiquitous in astrophysics
