Progressive increases in consumer demands along with aggressive industrial consumption led the world to proximate resource depletion weather changes soil and air degradation and water quality deterioration We now know that the paradigm of production at the expense of human condition is not sustainable This book briefly explains how we reached this situation

and offers suggestions as to what can be done to overcome it. It invites the best entrepreneurial talent and scientific and technological know-how to develop a sustainable economy around sustainable communities, services and sectors. A major obstacle previously identified by involved parties was the ability of accommodating for the emerging economic growth without causing harm to the environment, especially with resource depletion. This book provides the solution by creating a need to bring on a new revolution that preserves the rights of next generations to live in a healthy environment. This Sustainability Revolution requires the integration of economic, environmental and social factors as well as the practical aspects of implementing sustainability through green activities, which are discussed throughout the book. In this book, a globalization is proposed that encourages creativity and innovation towards sustainability. With this global sustainability approach, real globalization, both rich and poor, will benefit from the global sustainability approach. This will close the gap between rich and poor. Developing countries could reap the benefit of current technology without undergoing many of the growing pains associated with development of these technologies. Governments are able to better work together towards common goals now that there is an advantage in cooperation, an improved ability to interact and coordinate, and a global awareness of issues. The book presents a sustainability roadmap to bring together various concepts that have been dealt with independently by previous authors and link them to establish the fundamental practical steps. The flow path and the direction for successful implementation of a sustainability roadmap are also discussed in detail in the book. For the first time, the authors use sustainable communities to create a better quality of life for residents while minimizing the use of the resources to meet current needs and ensure adequate resources for future generations. These green communities create new industries for the local economy and improve public health, which offers more hope for their citizens. Sustainable transportation, renewable energy, recycling, clean water and urban forests help to make a more livable community and help to control the global climate change. They involve all citizens and incorporate local values into decision making.
