Lock, Stock, and Barrel Clayton E. Cramer, 2018-02-21 This provocative book debunks the myth that American gun culture was intentionally created by gun makers and demonstrates that gun ownership and use have been a core part of American society since our colonial origins Revisionist historians argue that American gun culture and manufacturing are relatively recent developments They further claim that widespread gun violence was largely absent from early American history because guns of all types and especially handguns were rare before 1848 According to these revisionists American gun culture was the creation of the first mass production gun manufacturers who used clever marketing to sell guns to people who neither wanted nor needed

them However as proven in this first scholarly history of gun culture in early America gun ownership and use have in fact been central to American society from its very beginnings Lock Stock and Barrel The Origins of American Gun Culture shows that gunsmithing and gun manufacturing were important parts of the economies of the colonies and the early republic and explains how the American gun industry helped to create our modern world of precision mass production and high wages for workers **USITC Publication** ,1994 Twenty-Five Centuries of Technological Change J. Mokyr,2013-12-19 Mokyr provides a long term perspective on the economic impact of technological change surveying developments in production technologies between 500 BC and 1914 **High-Productivity Drilling Tools** Viktor P. Astakhov,2024-05-03 This completely updated volume covers the design manufacturing and inspection of high productivity drilling tools HPDT and addresses common issues with drilling system components It discards old notions and beliefs as it introduces scientifically and technically sound concepts and rules with detailed explanations and multiple practical examples High Productivity Drilling Tools Design and Geometry introduces the development of the concept of high productivity HP drill design and its manufacturing and application features This book continues to develop the concept of a drilling system in the new edition and includes new practical examples It explains how to properly design and manufacture drilling tools for a specific application and includes a detailed explanation of the design features tool manufacturing and implementation practices metrology of drilling and drilling tools and the tool failure analysis Using the coherency law as the guidelines introduced in the first edition the new edition shows how to formulate the requirements for the components of the drilling system pointing out that the drilling tool is the key component to be improved This practical book should be on the shelves of all industrial engineers those working in production and manufacturing process designers tool material designers cutting tool designers and quality specialists Researchers senior undergraduate students and graduate students will also find this book full of very helpful reference information This book is also available as a set Drills High Productivity Drilling Tools 2 Volume Set 9781032203508 Group Technology E.A. Arn,2012-12-06 Group Technology GT as a manufacturing concept has gained steady interest within the machine building industry all over the world Originally it was used more or less only in the so called parts family manufacturing concept With growing opportunities for using the computer in the design process operating planning and layout planning the potential advantages became more and more obvious In order to implement GT successfully and with a view to improving the overall economic situation of a production company it is necessary to consider all aspects of the complete manufacturing system Experience has shown that in the first stage a general basis has to be formed This is done by a clear and practical definition of three GT manufacturing systems the development of a set of classification systems for work pieces working operations and manufacturing equipment and in building a data bank from which a data basis for the GT planning process can be evaluated A second stage of implementation then considers the particular aspects of GT These are firstly a concept for layout and investment planning based on a representative parts

spectrum secondly for application of the GT idea in the design process three similar types of parts are to be developed as a logical supplement to the standard and recurring parts practice thirdly a three stage process planning and work measurement system can be developed for the so defined spectrum of similar parts
