Seminar paper from the year 2008 in the subject Business economics Investment and Finance grade 1 0 University of Applied Sciences Essen language English abstract The price movements of stocks are the result of complex interdependencies due to a vast number of influencing factors such as fundamental and psychological factors are expressed in the expectations and the behavior of the stock market participants To cope with this complexity and to derive an applicable asset strategy analysts distinguish particularly between two dominant analysis methods in practice the Fundamental and the Technical Analysis which have recently been supplemented by the approach of Behavioral Finance With reference to a strict interpretation of the theoretical assumptions of the Fundamental as well as the Technical Analysis these two concepts are mutually exclusive As a result of this there are a vast number of analysts who either acknowledge the Fundamental Analysis while denying the Technical Analysis and vice versa The Fundamentals criticize that the technical approach has a lack in academic foundation and is therefore similar to a kind of reading tea leaves whereas the Technicals are convinced that the Fundamental Analysis is not able to generate an advantage by analyzing the fundamental value drivers of a stock because those are already

reflected by the current market prices In practice the Fundamental Analysis seems to have its weaknesses particularly during extreme market phases e g during the New Economy bubble at the end of the nineties in which the psychology of the market participants gains in impact At the same time the fundamental aspects are seemingly neglected Furthermore the fundamental approach seems to have improvement capabilities particularly in terms of timing Psychological aspects of the market participants are at least indirectly included within the Technical Analysis which could be particularly used for timing decisions as well Nevertheless it has its weaknesses too e g it does not provide clearly defined interpretation rules for its various numbers of chart patterns and technical indicators Behavioral Finance seems to have its existence authority in practice as well due to decisions in stock markets made by human beings who do not always behave total rationally All these aspects lead to the master question if the two alternative analysis methods Technical Analysis and Behavioral Finance can deliver any useable supplements towards the Fundamental Analysis in terms of their practical application

Christian Koessler, 2010-12-23 Inhaltsangabe Introduction The following paper will outline the suitability of Technical Analysis TA regarding selective chosen tools for performance increase versus the classic Buy and Hold Strategy BHS These two approaches beside the Fundamental Analysis FA are the foundations used by investors concerning their Investment strategy and differ substantially in their nature Thereby this dissertation will investigate whether the application of active TA is a productive approach yielding to favourable results and having the ability to outperform the passive BHS To achieve substantive results the comparisons of performances will be stretched to 21 years and are based on the following three indices which differ significantly concerning their location volume and importance Standard 200 days and 100 days Moving Average Convergence Divergence Bollinger Bands Oscillators Relative Strength Index Slow Stochastic Momentum TA can be divided into Chartism and the statistical based TA Although a clear demarcation between these groups is not given in reality as most proponents of TA combine both techniques The vast majority of this dissertation will only reflect the latter This can also be justified as Chartists predict future price developments based on trend lines patterns and formations Murphy 1999 states that all Chartists are Technical Analysts but not all Technical Analysts are Chartists Due to the lack of standardised price characteristics Chartism implies a high degree of subjectivity Therefore the absence of operational ability of this sub area would not lead to a feasible analysis concerning an increase in performance We maintain that financial markets are either moving in boom or bust cycles Bull or Bear Markets The classic BHS based on the Investment Legend Benjamin Graham has
