

### Technical Report Writing

This article provides some general guidelines and "tips" for writing technical reports. Throughout the Mechanical Engineering curriculum you will be required to write formal reports--lab reports in ME 360 and ME 460; design project reports in ME 372 and ME 415; a capstone design project report in ME 490; and similar reports in other courses. Each of these reports has particular requirements established by the course instructor. However, the following rules for references, figures, tables, tense and voice, equations, etc., apply to all mechanical engineering writing. Specific instructions for ME 360 are spelled out at the end of this section.

#### How to Write a Report

All engineers must report their work, usually in writing. Skilled writers impress their readers favorably. Clear writing helps in preparing oral presentations. Follow the three rules given below for all reports, oral and written.

1. **Imagine your audience.** In ME 360, address your reports to a fellow student that has a background similar to yours, but is not in ME 360. Your reader relies on you for clear explanations.
2. **Be thorough and brief.** Include all the required sections (discussed below) and informative tables, equations, etc. Write a first draft, then edit carefully for redundancy, wordiness, clutter, etc.
3. **Organize for readability.** The question "Is the reader ready for this material?" guides the structure of the report. Overly detailed material, such as calculations, belong in the appendix.

#### Sections of the Lab Report

1. **Title Page.** Include the title of the lab, the author's name, the names of all lab partners, and the date. See the "Good Lab Report" in your ME 360 Manual for an example.
2. **Objective.** Describe in one or two sentences the purpose of the laboratory exercise: the "why." Be specific. Possible objectives are "to evaluate," "to verify," "to measure," "to compare," etc. Avoid non-engineering objectives, such as "to teach us" or "to show the student." In general, you will write a technical report where experimental results are compared to theory. The Objective section is written in the present tense.
3. **Background.** This section gives the reader information necessary to understand or appreciate the balance of the report. It puts things in focus by providing background and perspective. It should answer such questions as: Why was this done? How does this effort fit into the overall scope of things? The Background section is also used to relate your efforts to previous work done by yourself or others. For example, if your report covers electrical filters, then you should discuss a few (three to four) applications of filters. Applications that relate to mechanical engineering are preferred over generic engineering, technical, or consumer applications.

In a lab report, the Background section should also briefly describe the engineering theory used in the experiment and the analysis of its results. Any theoretically predicted results
