The Theory of Objectification Luis Radford,2021-04-06 The Theory of Objectification A Vygotskian Perspective on Knowing and Becoming in Mathematics Teaching and Learning presents a new educational theory in which learning is considered a cultural historical collective process The theory moves away from current conceptions of learning that focus on the construction or acquisition of conceptual contents Its starting point is that schools do not produce only knowledge they produce subjectivities too As a result learning is conceptualised as a process that is about knowing and becoming Drawing on the work of Vygotsky and Freire the theory of objectification offers a perspective to transform classrooms into sites of communal life where students make the experience of an ethics of solidarity responsibility plurality and inclusivity It posits

the goal of education in general and mathematics education in particular as a political societal historical and cultural endeavour aimed at the dialectical creation of reflexive and ethical subjects who critically position themselves in historically and culturally constituted mathematical discourses and practices and who ponder new possibilities of action and thinking

The book is of special interest to educators in general and mathematics educators in particular as well as to graduate and undergraduate students
