

Unit 3: Uniform Acceleration Worksheet 2

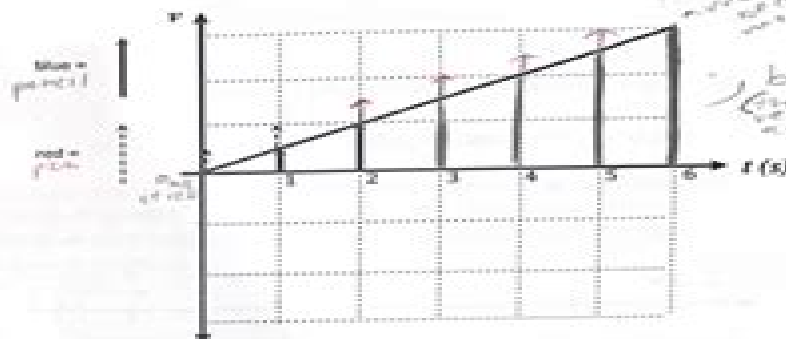

Name Alan Date 1/1/18

An object starts from rest and speeds up at a constant rate while moving in the positive direction for 6 s.

1. Examine the velocity vs. time graph to the right.

- a. Describe the motion of the object.

- starting at rest
- moving in + direction
- object is speeding up
- moving pretty fast

- b. On the graph, draw a blue arrow from the time axis to the plotted line for each clock reading ($t = 0$ through $t = 6.0$ s). ($t = 0$ through $t = 2.0$ s have been done for you.)

Each blue arrow is a vector that represents velocity at each clock reading.

- i. Why is there no blue arrow at $t = 0$?
because there was no velocity ($v = 0$)
 - ii. What do you notice about the length of these arrows?
getting longer since the object is speeding up
 - iii. What does this tell you about the motion of the object?
fasten
- c. The velocity changes as time goes on. At $t = 0$ on the graph, a red arrow pointing straight up (along what you would call "rise") has been drawn from the plotted line at $t = 0$ to the value of the velocity at $t = 1.0$ s. The length of this arrow represents the change in velocity from $t = 0$ to $t = 1.0$ s.

- i. This red arrow can also be thought of as a vector representing the Δv at $t = 0$.
- ii. Draw a red arrow of appropriate length for each clock reading from $t = 2.0$ s through $t = 6.0$ s. ($t = 0$ and $t = 1.0$ s have been done for you).

What do you notice about the length of these arrows?

they are all the same length
acceleration is constant

- d. Draw a motion map representing the motion of this object. Choose an appropriate zero position for the position axis. Make one dot every second. Use blue arrows to represent velocity and red arrows to represent acceleration. Your arrows should appear in length like those you draw on your graph.
