Fishing for Human Perceptions in Coastal and Island Marine Resource Use Systems, 2nd Edition Annette Breckwoldt, Wen-Cheng Wang, Hans von Storch, Beate M. W. Ratter, 2019-06-07

Human perceptions decision making and pro environmental behaviour are closely connected This Research Topic focuses on bringing together perceptions and behaviour for sustainable coastal and island marine resource use systems Management and governance of large and small scale coastal marine resource use systems function in highly complex social and ecological environments which are culturally embedded economically interest led and politically biased Management processes therefore have to integrate multiple perspectives as well as perception driven standpoints on the individual as well as the decision makers levels Consequently the analysis of perceptions has developed not only as part of philosophy and psychology but also of environmental science anthropology and human geography It encompasses intuitions values attitudes thoughts mind sets place attachments and sense of place All of these influence human behavior and action and are collected or are available within the respective marine resource use system which may support the livelihood of a large part of the local population Management and governance are not only about mediating between resource use conflicts or establishing marine protected areas they deal with people and their ideas and perceptions Understanding the related decision making processes on multiple scales and levels hence means much more than economically assessing the available marine resources or existing threats to the associated system Over the past decade there has been a growing inter and transdisciplinary international community becoming interested in research which integrates perceptions of coastal and inland residents local and regional stakeholder groups as well as resource and environmental managers and decision makers By acknowledging the importance of the individual perspective and interest led personal views it became obvious how valuable and important these sources of

information are for coastal research An increase of research effort spent on the link between perceptions and behaviour in marine resource use systems is thus both timely and needed By offering a diversity of inspiring and comprehensive contributions on the link between perceptions and behaviour this Research Topic aspires to critically enlighten the discourse and applicability of such research for finding sustainable locally identified anchored and integrated marine resource use pathways

Geraghty, Linda Crowl, 1994 Science of the Pacific Island Peoples is a series of four volumes which contains a unique collection of traditional scientific and technical knowledge from the Pacific Islands Traditional knowledge based on accumulated experience or continuous usage is usually passed from one generation to the next by word of mouth and demonstration Having had little attention from the media education ministries or development agencies traditional knowledge is in danger of being forgotten These books attempt to record some aspects of traditional knowledge before they are lost This the fourth volume on Education Language Patterns and Policy contains chapters on allegory Australia tourism the 21st century Fijian cosmology Tongan symmetries Papua New Guinea the Cook Islands communication and information the Crown Research Institutes of Aotearoa New Zealand Polynesian thought Maori knowledge developmental activities in Western Samoa Fijian mats Micronesian development and Vanuatu games The other volumes in the series are Ocean and Coastal Studies volume 1 Land Use and Agriculture volume 2 and Fauna Flora Food Medicine volume 3 Back cover

Surface Diffusion M.C. Tringides, 1997-12-31 The interest in the problem of surface diffusion has been steadily growing over the last fifteen years This is clearly evident from the increase in the number of papers dealing with the problem the development of new experimental techniques and the specialized sessions focusing on diffusion in national and international meetings Part of the driving force behind this increasing activity is our recently acquired ability to observe and possibly control atomic scale phenomena It is now possible to look selectively at individual atomistic processes and to determine their relative importance during growth and reactions at surfaces The number of researchers interested in this problem also has been growing steadily which generates the need for a good reference source to familiarize newcomers to the problem While the recent emphasis is on the role of diffusion during growth there is also continuing progress on the more traditional aspects of the problem describing mass transport in an ensemble of particles Such a description is based on the statistical mechanical analysis of a collection of particles that mutually interact and develop correlations An average over the multitude of atomistic processes that operate under these conditions is necessary to fully describe the dynamics in the system
