

1. The following figure represents a network of physically linked devices labeled P through S. A line between two devices indicates a connection. Devices can communicate only through the connections shown.

Which of the following statements best explains the ability of the network to provide fault tolerance?

- (A) The network is considered fault-tolerant because there are redundant paths between each pair of devices.
- (B) The network is considered fault-tolerant because it guarantees that no individual component will fail.
- (C) The network is not considered fault-tolerant because it relies on physical connections.
- (D) The network is not considered fault-tolerant because it provides more paths than are needed.
