

Basic Cells of the Nervous System

Neuron

- Basic functional cell of nervous system
- Transmits impulses (up to 250 mph)

Parts of a Neuron

- **Dendrite** – receive stimulus and carries it impulses toward the cell body
- **Cell Body** with nucleus – nucleus & most of cytoplasm
- **Axon** – fiber which carries impulses away from cell body
- **Schwann Cells**- cells which produce myelin or fat layer in the Peripheral Nervous System
- **Myelin sheath** – dense lipid layer which insulates the axon – makes the axon look gray
- **Node of Ranvier** – gaps or nodes in the myelin sheath
- Impulses travel **from dendrite to cell body to axon**

Three types of Neurons

- **Sensory neurons** – bring messages to CNS
- **Motor neurons** - carry messages from CNS
- **Interneurons** – between sensory & motor neurons in the CNS

Impulses

- A **stimulus** is a change in the environment with sufficient strength to initiate a response.
- **Excitability** is the ability of a neuron to respond to the stimulus and convert it into a nerve impulse
- **All of Nothing Rule** – The stimulus is either strong enough to start and impulse or nothing happens
- Impulses are always the **same strength along a given neuron** and they are **self-propagation** – once it starts it continues to the end of the neuron in only one direction- **from dendrite to cell body to axon**
- The nerve impulse causes a movement of ions across the cell membrane of the nerve cell.

Synapse

- **Synapse** - small gap or space between the axon of one neuron and the dendrite of another - **the neurons do not actually touch at the synapse**
- It is junction between neurons which uses neurotransmitters to start the impulse in the second neuron or an effector (muscle or gland)
- The synapse insures one-way transmission of impulses

Neurotransmitters

Neurotransmitters – Chemicals in the junction which allow impulses to be started in the second neuron

Chemicals called neurotransmitters cross a gap in the synapse and continue the nerve impulse.

Zimbardo and Weber's Psychology, Second Edition Peter C. Gram, Philip G. Zimbardo,1997 Psychology Third Edition
builds upon the experience and reputations of Phil Zimbardo and Ann Weber with the addition of a new co author Bob
Johnson who has a wealth of teaching experience at the community college level This briefer less expensive book presents
psychology in a meaningful manageable format that focuses on the key questions and core concepts of psychology
Introductory psychology covers such a wide range of topics and issues that it becomes difficult for readers to see the forest
for the trees To make key psychological concepts more meaningful the authors found inspiration in a classic chess study This
study showed that experts did no better than novices at remembering the location of pieces on a chess board when they were
placed randomly Only when the patterns represented actual game situations did they make sense and therefore become more
easily memorable for the experts Clearly meaningful patterns are easier to remember and understand than random
arrangements and Psychology applies this by presenting the field of psychology in meaningful patterns to enhance
comprehension These concepts are then applied to readers own lives study skills and the world around them Finally
Psychology integrates a cross cultural and multicultural perspective to make psychology meaningful for everyone For anyone
