Factoring Special Products

Factor the following special products. The first two expressions are $a^2 - b^2$ and $a^2 + b^2$ and the third is $a^2 - b^2$. The following pattern should help to factor the difference of two squares.

Difference of Squares	$a^2 - b^2 = (a + b)(a - b)$
-----------------------	------------------------------

Example 1: Factor the difference of two squares.

a. $a^2 - b^2$

$a^2 - b^2$

$a^2 - b^2$

$a^2 - b^2 = (a + b)(a - b)$

$a^2 - b^2 = (a + b)(a - b)$

$a^2 - b^2$

Example 2: Factor the difference of two squares.

Using Design Research and History to Tackle a Fundamental Problem with School Algebra Sinan Kanbir,M. A. (Ken) Clements,Nerida F. Ellerton,2017-10-28 In this well illustrated book the authors Sinan Kanbir Ken Clements and Nerida Ellerton tackle a persistent and universal problem in school mathematics why do so many middle school and secondary school students find it difficult to learn algebra well What makes the book important are the unique features which comprise the design research approach that the authors adopted in seeking a solution to the problem The first unique feature is that the authors offer an overview of the history of school algebra Despite the fact that algebra has been an important component of secondary school mathematics for more than three centuries there has never been a comprehensive historical analysis of factors influencing the teaching and learning of that component The authors identify through historical analysis six purposes of school algebra a algebra as a body of knowledge essential to higher mathematical and scientific studies b algebra as generalized arithmetic c algebra as a prerequisite for entry to higher studies d algebra as offering a language and set of procedures for modeling real life problems e algebra as an aid to describing structural properties in elementary mathematics and f algebra as a study of variables They also raise the question whether school algebra represents a unidimensional trait Kanbir Clements and Ellerton offer an unusual hybrid theoretical framework for their intervention study by which seventh grade students significantly improved their elementary algebra knowledge and skills Their theoretical frame combined Charles Sanders Peirce s triadic signifier interpretant signified theory which is in the realm of semiotics with Johann Friedrich Herbart s theory of apperception and Ken Clements and Gina Del Campo s theory relating to the need to expand modes of communications in mathematics classrooms so that students engage in receptive and expressive modes Practicing classroom teachers formed part of the research team This book appears in Springer s series on the History of Mathematics Education Not only does it include an important analysis of the history of school algebra but it also adopts a theoretical frame which relies more on theories from the past than on contemporary theories in the field of mathematics education The results of the well designed classroom intervention are sufficiently impressive that the study might

Carraher, Bárbara M. Brizuela, 2006-08-29 Bringing Out the Algebraic Character of Arithmetic contributes to a growing body of research relevant to efforts to make algebra an integral part of early mathematics instruction an area of studies that has come to be known as Early Algebra It provides both a rationale for promoting algebraic reasoning in the elementary school curriculum and empirical data to support it The authors regard Early Algebra not as accelerated instruction but as an approach to existing topics in the early mathematics curriculum that highlights their algebraic character Each chapter shows young learners engaged in mathematics tasks where there has been a shift away from computations on specific amounts toward thinking about relations and functional dependencies The authors show how young learners attempt to work with mathematical generalizations before they have learned formal algebraic notation The book suitable as a text in undergraduate or graduate mathematics education courses includes downloadable resources with additional text and video footage on how students reason about addition and subtraction as functions on how students understand multiplication when it is presented as a function and on how children use notations in algebraic problems involving fractions These three videopapers written text with embedded video footage present relevant discussions that help identify students mathematical reasoning The printed text in the book includes transcriptions of the video episodes in the CD ROM Bringing Out the Algebraic Character of Arithmetic is aimed at researchers practitioners curriculum developers policy makers and graduate students across the mathematics education community who wish to understand how young learners deal with algebra before they have learned about algebraic notation
