Online Research? Tristram Hooley,Jane Wellens,John Marriott,2012-06-21 The massive expansion of the internet into every aspect of our lives creates a challenge for social researchers can they simply transfer their traditional methods and techniques online or do they need to reinvent research methods for the new environment As online research becomes increasingly prevalent it becomes more important for researchers to have an answer to these questions and an approach to conducting research online This book is a straightforward accessible introduction to social research online It covers the key issues and concerns for social scientists online surveys focus groups interviews ethnographies and experiments as well as discussing the implications of social media and of online research ethics It provides a detailed up to date glossary and bibliography for those new to the area Short clear case studies throughout allow students to see examples of the research in practice Wide ranging and interdisciplinary What is Online Research shows social scientists of all levels from undergraduates to established researchers how to engage in the online environment in appropriate ways and points the way forward for future research *Artificial Life VII* Mark A. Bedau,John S. McCaskill,Norman H. Packard,Steen Rasmussen,2000-08-01 The term artificial life describes research into synthetic systems that possess some of the essential properties of life This interdisciplinary field includes biologists computer scientists physicists chemists geneticists and others Artificial life may be viewed as an attempt to understand high level behavior from low level rules for example how the simple interactions between

ants and their environment lead to complex trail following behavior. An understanding of such relationships in particular systems can suggest novel solutions to complex real world problems such as disease prevention, stock market prediction and data mining on the Internet. Since their inception in 1987, the Artificial Life meetings have grown from small workshops to truly international conferences reflecting the field's increasing appeal to researchers in all areas of science. Sentiment Analysis and Deep Learning Subarna Shakya, Ke-Lin Du, Klimis Ntalianis, 2023-01-01. This book gathers selected papers presented at International Conference on Sentimental Analysis and Deep Learning ICSADL 2022 jointly organized by Tribhuvan University Nepal and Prince of Songkla University Thailand during 16-17 June 2022. The volume discusses state of the art research works on incorporating artificial intelligence models like deep learning techniques for intelligent sentiment analysis applications. Emotions and sentiments are emerging as the most important human factors to understand the prominent user generated semantics and perceptions from the humongous volume of user generated data. In this scenario, sentiment analysis emerges as a significant breakthrough technology which can automatically analyze the human emotions in the data driven applications. Sentiment analysis gains the ability to sense the existing voluminous unstructured data and delivers a real time analysis to efficiently automate the business processes. *Understanding New Media* Kim H. Veltman, 2006. This book outlines the development currently underway in the technology of new media and looks further to examine the unforeseen effects of this phenomenon on our culture, our philosophies and our spiritual outlook. Value and Reward Based Learning in Neurobots Jeffrey L. Krichmar, Florian Röhrbein, 2015-03-05. Organisms are equipped with value systems that signal the salience of environmental cues to their nervous system, causing a change in the nervous system that results in modification of their behavior. These systems are necessary for an organism to adapt its behavior when an important environmental event occurs. A value system constitutes a basic assumption of what is good and bad for an agent. These value systems have been effectively used in robotic systems to shape behavior. For example, many robots have used models of the dopaminergic system to reinforce behavior that leads to rewards. Other modulatory systems that shape behavior are acetylcholine's effect on attention, norepinephrine's effect on vigilance and serotonin's effect on impulsiveness, mood and risk. Moreover, hormonal systems such as oxytocin and its effect on trust constitute as a value system. This book presents current research involving neurobiologically inspired robots whose behavior is 1. Shaped by value and reward learning, 2. adapted through interaction with the environment and 3. shaped by extracting value from the environment.
