The Political Role of the European Commission in Regulating State Aid Policy Elena Escalante-Block, 2025-06-27

This book delves into questions of whether the European Commission is effectively regulating large corporations in Europe and the public perceptions of the legitimacy of its decisions by examining state aid cases and when and how actors choose to politicise or depoliticise them. The book analyses how these corporations get away with certain anti competitive behaviours and whether the European Commission is achieving something positive with its state aid cases in this regard. It also asks whether the role of the European Commission in regulating anti competitive behaviour is perceived as legitimate by different political actors in the media. By uncovering how politicisation and depoliticisation can both positively and negatively shape the EU's legitimacy, this book brings clarity to debates about the evolving role of the European Commission in an era of increased political contestation. This book is of key interest to scholars and students of European Union politics, policy, European politics, comparative politics, public policy, political communication, global business law and regulation, sociology, public policy and law, and International Political Economy. *Autonomous Driving* Markus Maurer, J. Christian

Gerdes, Barbara Lenz, Hermann Winner, 2016-05-21. This book takes a look at fully automated autonomous vehicles and discusses many open questions. How can autonomous vehicles be integrated into the current transportation system with diverse users and human drivers? Where do automated vehicles fall under current legal frameworks? What risks are associated with automation and how will society respond to these risks? How will the marketplace react to automated vehicles and what changes may be necessary for companies? Experts from Germany and the United States define key societal engineering and mobility issues related to the automation of vehicles. They discuss the decisions programmers of automated vehicles must make to enable vehicles to perceive their environment, interact with other road users, and choose actions that may have ethical consequences. The authors further identify expectations and concerns that will form the basis for individual and societal acceptance of autonomous driving. While the safety benefits of such vehicles are tremendous, the authors demonstrate that these benefits will only be achieved if vehicles have an appropriate safety concept at the heart of their design. Realizing the potential of automated vehicles to reorganize traffic and transform mobility of people and goods requires similar care in the design of vehicles and networks. By covering all of these topics, the book aims to provide a current, comprehensive and scientifically sound treatment of the emerging field of autonomous driving. **The Man who Loved**
