Unsteady Aerodynamics and Aeroelasticity of

Turbomachines Torsten H. Fransson, 2012-12-06 Twenty one years have passed since the first symposium in this series was held in Paris 1976 Since then there have been meetings in Lausanne 1980 Cambridge 1984 Aachen 1987 Beijing 1989 Notre Dame 1991 and Fukuoka 1994 During this period a tremendous development in the field of unsteady aerodynamics and aeroelasticity in turbomachines has taken place As steady state flow conditions become better known and as blades in the turbomachine are constantly pushed towards lower weight and higher load and efficiency the importance of unsteady phenomena appear more clearly than The 8 Symposium was as the previous ones of high quality Furthermore it presented the audience with the latest developments in experimental numerical and theoretical research More papers than ever before were submitted to the conference As the organising committee wanted to preserve the uniqueness of the symposium by having single sessions and thus mingle speakers and audience with different backgrounds in this interdisciplinary field only a limited number of papers could be accepted 54 papers were accepted and presented at the meeting all of which are included in the present proceedings

Computational Partial Differential Equations

Hans Petter Langtangen, 2013-04-17 During the last decades there has been a tremendous advancement of computer hardware numerical algorithms and scientific software Engineers and scientists are now equipped with tools that make it possible to explore real world applications of high complexity by means of mathematical models and computer simulation Experimentation based on numerical simulation has become fundamental in engineering and many of the traditional sciences A common feature of mathematical models in physics geology astrophysics mechanics geophysics as well as in most engineering disciplines is the appearance of systems of partial differential equations PDEs This text aims at equipping the reader with tools and skills for formulating solution methods for PDEs and producing associated running code Successful problem solving by means of mathematical models in science and engineering often demands a synthesis of knowledge from several fields Besides the physical application itself one must master the tools of mathematical modeling numerical methods as well as software design and implementation In addition physical experiments or field measurements might play an important role in the derivation and the validation of models This book is written in the spirit of computational sciences as interdisciplinary activities Although it would be attractive to integrate subjects like mathematics physics numerics and software in book form few readers would have the necessary broad background to approach such a text
