Health literacy and disease prevention, volume II Sudip Bhattacharya, Ozden Gokdemir, Deep Shikha, Ferdinando Petrazzuoli, Poonam Kushwaha, 2024-03-06 This Research Topic is a follow on from the Topic Editors successful volume I The term health literacy was coined by Ratzan et al in the 1970s providing the minimal health education required in schools however this term is almost new and in the early phase of development Though many attempts have been made in the past to define health literacy WHO construed it as the cognitive and social skills which determine the motivation and ability of individuals to gain access to understand and use information in ways which promote and maintain good health Health literacy not only focuses on the individual behavior oriented communication but also on the various determinants of health such as environmental social and political factors thus

it is ahead in the concept of health education If health education methods go beyond the bounds of information diffusion and bring about interaction participation and critical analysis such kind of approach will lead to improved health literacy personal aid and social benefit by enabling adequate community action and contributions to the advancement of social capital
