Book Description

Unlock opportunities in the growing UAV market where drones are revolutionizing diverse sectors like agriculture surveying and the military This book walks you through the complete drone development life cycle from concept to pilot stage prototyping and ultimately a market ready product with domain specific applications

Starting with an introduction to unmanned systems principles of drone flight and its motion in 3D space this book shows you how to design a propulsion system tailored to your drone's needs You'll then get hands on with the entire drone assembly process covering airframe components and wiring Next you'll enhance drone connectivity and navigation with communication devices such as RFD900 Herelink and H 16 Pro GCS and hardware protocols like I2C and UART The book also guides you in using the open source flight software ArduPilot and PX4 along with firmware architecture and PID tuning for advanced control Additionally you'll go learn about AeroGCS Mission Planner and UGCS ground control stations tips for maiden flight and log analysis for optimizing performance while building a custom survey drone with a 60 min endurance 10km range live video feed and photography options By the end of this book you'll be equipped with all you need to build and fly your own drones and UAVs

What you will learn

- Explore the design principles for multicopter flight and its physics of motion
- Grasp terminologies associated with UAV flight systems
- Implement power trail communication and propulsion concepts in drone design
- Use IMUs and sensors in flight controllers and protocols like I2C SPI and MAVlink
- Familiarize yourself with open source drone flight stacks and ground control station software
- Apply the control law used in multicopter and the basics of PIDs
- Delve into modes of flying with remote controllers and analysis of flight logs

Who this book is for

This book is for beginner level drone engineers robotics engineers hardware and design engineers and hobbyists who want to enter the drone industry and enhance their knowledge of the physics mechanics avionics and programming of drones multicopters and UAVs While not a prerequisite a basic understanding of circuits microcontrollers and electronic instruments like multimeter camera and batteries along with fundamental concepts in physics and mathematics will be helpful
