

Unit 1 Review**REVIEW****LESSON 1-1****Operations on Real Numbers****Quick Review**

Sum, difference, and quotient of rational numbers are rational. Quotient of irrational numbers (other than divided by zero) are rational.

The sum and difference of a rational number and an irrational number are irrational. The product and quotient (other than divided by a rational number) of an irrational number and an irrational number are irrational, except when the rational number is 0.

Example

Let a , b , c , and d be integers, with b or c and d or 0. Is the sum of $\frac{a}{b}$ and $\frac{c}{d}$ rational or irrational? Is their product rational or irrational?

$$\frac{a}{b} + \frac{c}{d} = \frac{ad + bc}{bd} \qquad \frac{a}{b} \cdot \frac{c}{d} = \frac{ac}{bd}$$

The sum and product are both rational.

Practice & Problem Solving

8. Give an example of two irrational numbers whose product is not small.

For each number, determine whether it is an element of the real numbers, irrational numbers, rational numbers, integers, or whole numbers. List all that apply.

9a. $\sqrt{2.5}$ 19. $\sqrt{25}$ 11. -48

Order from least to greatest.

19. 0.50 , $\sqrt{19}$, $\frac{\sqrt{19}}{2}$ 24. $\frac{18}{10}$, 2.4 , $\sqrt{5.05}$

15. **Make Sense and Persuade** Taylor wants tape to make a square play area in the basement for their doghouse. The area measures 16 ft in the side length of the square. Will it be at least 4 ft? Explain.

LESSON 1-2**Solving Linear Equations****Quick Review**

You can use properties of equality to solve linear equations. Use the Distributive Property and combine like terms, when needed.

Example

Solve $\frac{3}{4}(4x - 12) + 5x = 24$.

$$\frac{3}{4}(4x - 12) + 5x = 24$$

$$4x - 10 + 5x = 24$$

Distributive Property

$$9x - 10 = 24$$

Combine like terms.

$$9x - 10 + 10 = 24 + 10$$

Add 10 to each side.

$$9x = 34$$

Simplify

$$9x = 34$$

Divide each side by 9.

$$x = \frac{34}{9}$$

Simplify

Practice & Problem Solving

16. **Use Structure** What property would you use first to solve $\frac{1}{2}x + 6 = 10$? Explain.

Solve each equation.

17. $2(2x - 1) = 24$

18. $500 = 8(4x - 5)$

19. $\frac{3}{4} = \frac{2}{3}x - \frac{1}{2}$

20. $1.045x + 0.048 = 15.249$

21. **Model with Mathematics** The price for an adult movie ticket is $1\frac{1}{4}$ more than a movie ticket for a child. They take their daughter to the movie. They a box of popcorn for \$5.50, and spend \$26.50. Write and solve an equation to find the price for each of their movie tickets.

Integers, Polynomials, and Rings Ronald S. Irving, 2004-01-08 This book began life as a set of notes that I developed for a course at the University of Washington entitled Introduction to Modern Algebra for Teachers Originally conceived as a text for future secondary school mathematics teachers it has developed into a book that could serve well as a text in an undergraduate course in abstract algebra or a course designed as an introduction to higher mathematics This book differs from many undergraduate algebra texts in fundamental ways the reasons lie in the book's origin and the goals I set for the course The course is a two quarter sequence required of students intending to fulfill the requirements of the teacher preparation option for our B.A. degree in mathematics or of the teacher preparation minor It is required as well of those intending to matriculate in our university's Master's in Teaching program for secondary mathematics teachers This is the principal course they take involving abstraction and proof and they come to it with perhaps as little background as a year of calculus and a quarter of linear algebra The mathematical ability of the students varies widely as does their level of mathematical interest

A History of Chinese Mathematics Jean-Claude Martzloff, 2007-08-17 Since the end of the 19th century a number of specialised journals albeit with a large audience have regularly included articles on the history of Chinese mathematics while a number of books on the history of mathematics include a chapter on the subject Thus the progressive increase in our knowledge of the content of Chinese mathematics has been accompanied by the realisation that as far as results are concerned there are numerous similarities between Chinese mathematics and other ancient and medieval mathematics For example Pythagoras theorem the double false position rules Hero's formulae and Ruffini-Horner's method are found almost everywhere As far as the reasoning used to obtain these results is concerned the fact that it is difficult to find rational justifications in the original texts has led to the reconstitution of proofs using appropriate tools of present day elementary algebra Consequently the conclusion that Chinese mathematics is of a fundamentally algebraic nature has been ventured However in recent decades new studies particularly in China and Japan have adopted a different approach to the original texts in that they have considered the Chinese modes of reasoning as these can be deduced from the rare texts which contain justifications By studying the results and the methods explicitly mentioned in these texts hand in hand this Chinese and Japanese research has attempted to reconstruct the conceptions of ancient authors within a given culture and period without necessarily involving the convenient but often distorting social and conceptual framework of present day mathematics

Algebra of Conscience V.A. Lefebvre, 2013-04-17 Conscience is an essential human attribute Nevertheless in the construction of formal models of the subject it is customarily left outside the framework of theoretical analysis The Algebra of Conscience whose first edition appeared in 1982 was the first specialized work modeling the phenomenon of conscience The method used in this book made it possible to connect moral experience with decision making procedures on the level of mathematical models The application of such models allows us to propose the hypothesis of two fundamentally different ethical systems determining the normative

patterns of human behavior in situations of conflict Under the first ethical system the subject's self esteem is raised if the subject seeks to resolve the conflict in the second it is raised by seeking to dramatize the conflict The new edition of *The Algebra of Conscience* is significantly expanded The second part of the book devoted to moral choice is completely new Based on the theory presented in the first part it constructs the model of a subject capable of making an intentional choice A special variable corresponds to the subject's intention This development allows us to include within the model freedom of will and freedom of choice and also to generalize classical 2 2 game theory to the case where outcomes in addition to having utility measures are either positive or negative In its concluding chapters the book constructs a dynamic model of the intentional subject faced with a choice between two alternatives neither of which is morally acceptable for the subject It is shown that in this case the probabilities of choice of the alternatives may change chaotically From this it follows that one cannot predict which alternative will be chosen or even the probabilities with which they will be chosen Audience The book is addressed to a broad readership having elementary knowledge of mathematical logic and the theory of probability It can be used in college courses studying the modelling of moral choice The book's material can also be used in the design of artificial intelligence systems
