Systems and Signal Processing with MATLAB® Taan S. ElAli, 2021-04-29 Most books on linear systems for undergraduates cover discrete and continuous systems material together in a single volume Such books also include topics in discrete and continuous filter design and discrete and continuous state space representations However with this magnitude of coverage the student typically gets a little of both discrete and continuous linear systems but not enough of either Minimal coverage of discrete linear systems material is acceptable provided that there is ample coverage of continuous linear systems On the other hand minimal coverage of continuous linear systems does no justice to either of the two areas Under the best of circumstances a student needs a solid background in both these subjects Continuous linear systems and discrete linear systems are broad topics and each merit a single book devoted to the respective subject matter The objective of this set of two volumes is to present the needed material for each at the undergraduate level and present the required material using MATLAB The MathWorks Inc

Non-parametric Tuning of PID Controllers Igor Boiko, 2012-08-22 The relay feedback test RFT has become a popular and efficient in process identification and automatic controller tuning Non parametric Tuning of PID Controllers couples new modifications of

classical RFT with application specific optimal tuning rules to form a non parametric method of test and tuning Test and tuning are coordinated through a set of common parameters so that a PID controller can obtain the desired gain or phase margins in a system exactly even with unknown process dynamics The concept of process specific optimal tuning rules in the nonparametric setup with corresponding tuning rules for flow level pressure and temperature control loops is presented in the text Common problems of tuning accuracy based on parametric and non parametric approaches are addressed In addition the text treats the parametric approach to tuning based on the modified RFT approach and the exact model of oscillations in the system under test using the locus of a perturbed relay system LPRS method Industrial loop tuning for distributed control systems using modified RFT is also described Many of the problems of tuning rules optimization and identification with modified RFT are accompanied by MATLAB code downloadable from <http://extras.springer.com> 978 1 4471 4464 9 to allow the reader to duplicate the results Non parametric Tuning of PID Controllers is written for readers with previous knowledge of linear control and will be of interest to academic control researchers and graduate students and to practitioners working in a variety of chemical mechanical and process engineering related industries
