Intelligent Tutoring Systems Barry P. Goettl, Henry M. Halff, Carol L. Redfield, Valerie J. Shute, 2003-06-29 The first International Conference on Intelligent Tutoring Systems ITS was held ten years ago in Montreal ITS 88 It was so well received by the international community that the organizers decided to do it again in Montreal four years later in 1992 and then again in 1996 ITS 98 differs from the previous ones in that this is the first time the conference has been held outside of Montreal and it's only been two years not four since the last one One interesting aspect of the ITS conferences is that they are not explicitly bound to some organization e.g. IEEE or AACE Rather the founder of these conferences Claude Frasson started them as a means to congregate researchers actively involved in the ITS field and provide a forum for presentation and debate of the most currently challenging issues Thus the unifying theme is science This year's hot topics differ from those in the earlier ITS conferences as they reflect ever changing trends in ITS research A few of the issues being examined at ITS 98 include Web based tutoring systems deploying ITS in the real world tutoring and authoring tools architectures and knowledge structure and representation

Intelligent Tutoring Systems Gilles Gauthier, Claude Frasson, Kurt VanLehn, 2003-08-06 ITS 2000 is the fifth international conference on Intelligent Tutoring Systems The preceding conferences were organized in Montreal in 1988 1992 and 1996 These conferences were so strongly supported by the international community that it was decided to hold them every two years ITS 98 was organized by Carol Redfield and Valerie Shute and held in San Antonio Texas The program committee included members from 13 countries They received 140 papers 110 full papers and 30 young researchers papers from 21 countries As with any international conference whose proceedings serve as a reference for the field the program committee faced the demanding task of selecting papers from a particularly high quality set of submissions This proceedings volume contains 61 papers selected by the program committee from the 110 papers submitted They were presented at the conference along with six invited lectures from well known speakers The papers cover a wide range of subjects including architectures for ITS teaching and learning strategies authoring systems learning environments instructional designs cognitive approaches student modeling distributed learning environments evaluation of instructional systems cooperative systems Web based training systems intelligent agents agent based tutoring systems intelligent multimedia and hypermedia systems interface design and intelligent distance learning

Kriete, 2019-10-02 Differential Equations Techniques Theory and Applications is designed for a modern first course in differential equations either one or two semesters in length The organization of the book interweaves the three components in the subtitle with each building on and supporting the others Techniques include not just computational methods for producing solutions to differential equations but also qualitative methods for extracting conceptual information about differential equations and the systems modeled by them Theory is developed as a means of organizing understanding and codifying general principles Applications show the usefulness of the subject as a whole and heighten interest in both solution techniques and theory Formal proofs are included in cases where they enhance core understanding otherwise they are replaced by informal justifications containing key ideas of a proof in a more conversational format Applications are drawn from a wide variety of fields those in physical science and engineering are prominent of course but models from biology medicine ecology economics and sports are also featured The 1 400 exercises are especially compelling They range from routine calculations to large scale projects The more difficult problems both theoretical and applied are typically presented in manageable steps The hundreds of meticulously detailed modeling problems were deliberately designed along pedagogical principles found especially effective in the MAA study Characteristics of Successful Calculus Programs namely that asking students to work problems that require them to grapple with concepts or even proofs and do modeling activities is key to

successful student experiences and retention in STEM programs The exposition itself is exceptionally readable rigorous yet conversational Students will find it inviting and approachable The text supports many different styles of pedagogy from traditional lecture to a flipped classroom model The availability of a computer algebra system is not assumed but there are many opportunities to incorporate the use of one *Technology for Teaching* Priscilla Norton, Debra Sprague, 2001 Finally the authors have developed a website for this book that will keep the book current by suggesting activities providing updates and offering additional examples for teaching and learning Jacket
