Frontier Research on Artificial Intelligence and Radiomics in Neurodegenerative Diseases

Shi-Nan Wu,Wencai Liu, Qi Zhang,Fuqing Zhou,2025-11-13 As the global population ages the prevalence of neurodegenerative diseases is rising posing significant challenges to healthcare systems Artificial intelligence AI and radiomics are emerging as powerful tools in this domain offering innovative methods for diagnosing monitoring and treating these conditions Radiomics enables the extraction of quantitative features from medical images while AI excels at analyzing large datasets and identifying patterns that might be imperceptible to the human eye The integration of these technologies particularly in neuroimaging holds the potential to revolutionize our understanding and management of neurodegenerative diseases The goal of this research is to address the complex challenges posed by neurodegenerative diseases through the application of AI and radiomics Specifically we aim to 1 Identify and validate novel imaging biomarkers for the early detection and monitoring of neurodegenerative disorders 2 Develop AI driven predictive models to assess disease progression and treatment outcomes enabling personalized healthcare approaches 3 Utilize machine learning and database mining techniques to analyze extensive health datasets uncovering new insights and correlations specific to neurodegenerative diseases 4 Evaluate the clinical utility of these technologies in enhancing diagnostic accuracy improving patient outcomes and optimizing healthcare resources

Understanding Autonomous Cooperation and Control in Logistics

Michael Hülsmann,Katja Windt,2007-06-30 One of the great challenges in flexible production and supply chains is the availability of necessary information at any time and any place As a result of increasing dynamical and structural complexity of structures and processes in production it is often impossible to make all necessary information available to a central instance in real time and to perform appropriate measures of control in terms of a defined target system A fast and flexible adaptation to changing basic conditions ought to be achieved by establishing autonomous logistics processes In this context several fundamental questions concerning autonomous cooperating logistics processes were investigated The identification

problem What are autonomous logistics processes and how do they differ from conventionally managed processes The description problem Which changes will autonomy cause in order processing One of the first results is a definition for the term autonomy for applications in engineering science The constituent characteristics of this definition were considered within the development of the catalogue of criteria in order to describe autonomous logistic processes Regarding the modelling of autonomous processes first requirements for modelling methods were specified To validate the research results a production logistic shop floor scenario and a practical scenario based on the real business processes of an automobile terminal were developed Simulation studies concerning autonomously controlled allocation of parking areas document comprehensive opportunities for improvement *Mobile Ad-hoc Networking* Dr. Humayun Bakht, 2018-02-12 Mobile Ad hoc Networking **Technical Reports Awareness Circular : TRAC.** ,1989-12 **Dynamic Functioning of Resting State Networks in Physiological and Pathological Conditions** Roberto Esposito, Filippo Cieri, Nicoletta Cera, Dante Mantini, Alessandra Griffa, 2021-02-24 **Recent advances in research on cognitive frailty and related conditions** Takao Yamasaki, Shuzo Kumagai, Mutsuhide Tanaka, 2025-04-25 Cognitive frailty CF is an age related condition characterized by the comorbidity of physical frailty and cognitive impairment This includes reduced cognitive function due to physical and brain diseases as well as accelerated brain aging in the absence of manifest brain diseases like dementia CF is associated with a high risk of adverse events such as dementia the need for nursing care hospitalization disability and death It is important to note that CF is reversible and adverse events can be prevented with early detection and intervention Therefore research on CF has increased rapidly in various fields in recent years This Research Topic aims to elucidate the latest advances in the field of basic and clinical research on CF Specifically we will focus on areas such as epidemiology mechanisms biomarkers and interventions **Ad-hoc Networks: Fundamental Properties and Network Topologies** Ramin Hekmat, 2006-09-01 This book provides an original graph theoretical approach to the fundamental properties of wireless mobile ad hoc networks This approach is combined with a realistic radio model for physical links between nodes to produce new insight into network characteristics like connectivity degree distribution hopcount interference and capacity The book establishes directives for designing ad hoc networks and sensor networks It will interest the academic community and engineers who roll out ad hoc and sensor networks **Functional Connectivity of the Human Brain** Maria Assunta Rocca, Massimo Filippi, 2025-09-01 Functional Connectivity of the Human Brain From Mechanisms to Clinical Applications is a comprehensive review of mechanisms and analysis of methods of functional connectivity to map brain organization in healthy individuals and sick patients Providing full coverage of the discipline for a wide audience of different research and clinical specialists this volume begins with descriptions of mechanisms of functional connectivity and methodological approaches to quantify it followed by a focus on how functional connectivity has been used to describe brain function in healthy people and to characterize network disruption in diseased conditions This practical balance in book structure is
