Technology of Functional Cereal Products B R Hamaker, 2007-11-08 Cereal grains and their fractions contain many health protecting compounds such as phytochemicals vitamins and indigestible carbohydrates but the texture and taste of functional cereal products can be less than ideal This important collection reviews technologies for producing a wide range of cereal products with different health promoting properties and more acceptable sensory quality The first part of the book discusses the health effects of cereals with chapters on topics such as whole grain foods cereal micronutrients and resistant starch Consumer perception of health promoting cereal products and regulatory and labelling issues are also described The second part focuses on technologies to improve the quality of functional cereal products reviewing issues such as grain improvement novel cereal derived ingredients and formulation of low GI products Chapters dedicated to a wide range of product types are also included covering cereal foods made from oats rye barley and speciality grains and breads fortified with vitamins and minerals soy and omega 3 lipids among others Technology of functional cereal products is an essential reference for all those involved in research and development of health promoting cereal based foods Reviews technologies for producing a wide range of cereal products Discusses the health effect of cereals including whole grain foods and cereal micronutrients Describes consumer perception of health promoting cereal products *Millet and Sorghum* Jagannath V. Patil, 2016-12-20 Millets and sorghum are extremely important crops in many developing nations and because of the ability of many of them to thrive in low moisture situations they represent some exciting opportunities for further development to address the continuing and increasing impact of global temperature increase on the sustainability of the world's food crops The main focus of this thorough new book is the potential for crop improvement through new and traditional methods with the book's main chapters covering the following crops sorghum pearl millet finger millet foxtail millet proso millet little millet barnyard millet kodo millet tef and fonio Further chapters cover pests and diseases nutritional and industrial importance novel tools for improvement and seed systems in millets *Millet and Sorghum* provides full and comprehensive coverage of these crucially important crops their biology world status and potential for improvement and is an essential purchase for crop and plant scientists and food scientists and technologists throughout the developed and developing world All libraries in universities and research establishments where biological and agricultural sciences are studied and taught should have copies of this important book on their shelves Advances in Haploid Production in Higher Plants Alisher Touraev, Brian P. Forster, Shri Mohan Jain, 2008-12-18 The importance of haploids is well known to geneticists and plant breeders The discovery of anther derived haploid *Datura* plants in 1964 initiated great excitement in the plant breeding and genetics communities as it offered shortcuts in producing highly desirable homozygous plants Unfortunately the expected revolution was slow to materialise due to problems in extending methods to other species including genotypic dependence recalcitrance slow development of tissue culture technologies and a lack of knowledge of the underlying processes Recent years have

witnessed great strides in the research and application of haploids in higher plants After a lull in activities drivers for the resurgence have been 1 development of effective tissue culture protocols 2 identification of genes controlling embryogenesis and 3 large scale and wide spread commercial up take in plant breeding and plant biotechnology arenas The first major international symposium on Haploids in Higher Plants took place in Guelph Canada in 1974 At that time there was much excitement about the potential benefits but in his opening address Sir Ralph Riley offered the following words of caution I believe that it is quite likely that haploid research will contribute cultivars to agriculture in several crops in the future However the more extreme claims of the enthusiasts for haploid breeding must be treated with proper caution Plant breeding is subject from time to time to sweeping claims from enthusiastic proponents of new procedures
