The Unity Of The Universe D W Sciama:

Concepts of Mass in Contemporary Physics and Philosophy Max Jammer, 2009-06-28 Jammer then devotes a chapter to the distinction between inertial and gravitational mass and to the various versions of the so called equivalence principle with which Newton initiated his Principia but which also became the starting point of Einstein's general relativity which supersedes Newtonian physics The book concludes with a presentation of recently proposed global and local dynamical theories of the origin and nature of mass **BOOK JACKET** *The Accidental Universe* P. C. W. Davies, 1982-09-09 This book is a survey of the range of apparently miraculous accidents of nature that have enabled the universe to evolve its familiar structures atoms stars galaxies and life itself concludes with an investigation of the so called anthropic principle **The Light/dark Universe** James Martin Overduin, Paul S. Wesson, 2008 To the eyes of the average person and the trained scientist the night sky is dark even though the universe is populated by myriads of bright galaxies Why this happens is a question commonly called Olbers Paradox and dates from at least 1823 How dark is the night sky is a question which preoccupies astrophysicists at the present The answer to both questions tells us about the origin of the universe and the nature of its contents luminous galaxies like the Milky Way plus the dark matter between them and the mysterious dark energy which appears to be pushing everything apart In this book the fascinating history of Olbers Paradox is reviewed and the intricate physics of the light dark universe is examined in detail The fact that the night sky is dark a basic astronomical observation that anybody can make turns out to be connected with the finite age of the universe thereby confirming some event like the Big Bang But the space between the galaxies is not perfectly black and data on its murkiness at various wavelengths can be used to constrain and identify its unseen constituents **Mathematics: The Man-Made Universe** Sherman K. Stein, 2013-03-21 Highly readable volume covers number theory topology set theory geometry algebra and analysis plus the primes fundamental theory of arithmetic probability and more Solutions manual available upon request 1994 edition Beyond the Atmosphere: Early Years of Space Science Homer Edward Newell, 1980 *Reflections on the Problem of Consciousness* Errol E. Harris, 2006-01-12 The essential puzzle of consciousness is how the electro chemical activity constantly occurring in the brain translates into the conscious experience we enjoy In this highly praised study Errol Harris considers the attempts made by several important neuro scientists and philosophers to address the question and makes his own suggestions as to how it might be approached with the best prospect of intelligibility *Beyond the Atmosphere* Homer Edward Newell, 1980 *How Can Physics Underlie the Mind?* George Ellis, 2016-05-31 Physics underlies all complexity including our own existence how is this possible How can our own lives emerge from interactions of electrons protons and neutrons This book considers the interaction of physical and non physical causation in complex systems such as living beings and in particular in the human brain relating this to the emergence of higher levels of complexity with real causal powers In particular it explores the idea of top down causation which is the key effect allowing the emergence of true

complexity and also enables the causal efficacy of non physical entities including the value of money social conventions and ethical choices

Scientific Nihilism Daniel Athearn,1994-03-08 Scientific nihilism is the widespread and ascendant view that the prospects for genuine understanding in scientific knowledge are distinctly negative This view is especially characteristic of philosophy of science and is reflected in a number of professional and popular doctrines In the background is the growing perception that physical science is presently encountering the inherent limits of scientific understanding This book shows that the breakoff of narrative causal explanation in physics although remarkable is no basis for the negative view of scientific knowledge It demonstrates that radiation and field phenomena which include a wide array of enigmatic facts are amenable to explanation even in their most puzzling details Athearn responds fully to the assumption that narrative causal explanation in physics has suffered a permanent demise Rejecting the dogma of a clean bifurcation of philosophy and natural science he proposes a constructive rehabilitation of natural philosophy

Expanding Worldviews: Astrobiology, Big History and Cosmic Perspectives Ian Crawford,2021-06-07 This book collates papers presented at two international conferences held at the Australian National University in 2018 and Birkbeck College London in 2019 exploring the relationships between big history and astrobiology and their wider implications for society These two relatively new academic disciplines aim to integrate human history with the wider history of the universe and the search for life elsewhere The book will show that despite differences in emphasis big history and astrobiology share much in common especially their interdisciplinary approaches and the cosmic and evolutionary perspectives that they both engender Specifically the book addresses the unified all embracing nature of knowledge the impact of big history on humanity and the world at large the possible impact of SETI on astrobiology and big history the cultural signature of Earth s inhabitants beyond our own planet and the political implications of a planetary worldview The principal readership is envisaged to comprise scholars working in the fields of astrobiology big history and space exploration interested in forging interdisciplinary links between these diverse topics together with educators and a wider public interested in the societal implications of the cosmic and evolutionary perspectives engendered by research in these fields

Time, Space and Philosophy Christopher Ray,2002-09-11 This book provides a comprehensive up to date and accessible introduction to the philosophy of space and time Ray considers in detail the central questions of space and time which arise from the ideas of Zeno Newton Mach Leibniz and Einstein Time Space and Philosophy extends the debate in many areas absolute simultaneity is examined as well as black holes the big bang and even time travel Time Space and Philosophy will be invaluable to the student of philosophy and science and will be of considerable interest to mathematics students The clear non technical approach should also make it suitable to for the general reader

Schwartz,Tony Milligan,2016-07-25 This book aims to contribute significantly to the understanding of issues of value including the ultimate value of space related activities which repeatedly emerge in interdisciplinary discussions on space and society Although a recurring feature of discussions about space in the humanities the treatment of value questions has tended to be patchy of uneven quality and even on occasion idiosyncratic rather than drawing upon a close familiarity with state of the art ethical theory One of the volume's aims is to promote a more robust and theoretically informed approach to the ethical dimension of discussions on space and society While the contributions are written in a manner which is accessible across disciplines the book still withstands scrutiny by those whose work is primarily on ethics At the same time it allows academics across a range of disciplines an insight into current approaches toward how the work of ethics gets done

The issues of value raised could be used to inform debates about regulation space law and protocols for microbial discovery as well as longer range policy debates about funding
